## Welcome Message: David Epp

**It is my pleasure** to welcome everyone to the IMAC-XLII back in Orlando, Florida this year. I am looking forward to a strong conference where we can all gather again, exchange ideas, talk to exhibitors, and learn as much as possible from each other. Since it was first held in 1982, IMAC has evolved to encompass the latest technologies supporting structural dynamics. This broad focus on structural dynamics includes topics in simulation and modeling, nonlinear dynamics, sensors, signal processing and control spanning the full range of engineering disciplines.

There are so many people who have shaped our field and contributed to IMAC throughout its history. This year we are celebrating the incredible contributions of some of those giants with our theme “Standing on the Shoulders of Giants”. The conference will have all the traditional topics and information exchange we expect but will also include sessions focused on remembering David J Ewins, who passed away a year ago, and a keynote speaker recognizing the massive contributions of so many others.

I encourage everyone to look at the Awards page on the SEM website to see our history of recognizing these giants over the many years of the conference and society. The SEM Fellows and D. J. DeMichele award histories are interesting to scroll through as well as all the others to see awardees as far back as the early 1950s. David J Ewins was recognized as a Fellow in 2014 and received the D. J. DeMichele award in 1993. Our keynote speaker this year, Randy Mayes, was recognized as a Fellow in 2022 and received the D. J. DeMichele award in 2015. This recognition of worthy individual contributions to our field and the Society continues every year. All the awards for SEM are based on nominations and the SEM Honors Committee meets each summer at the Annual Conference to determine winners. To hear about the award winners this year, please join us on Wednesday for the IMAC Awards Luncheon where we will recognize a select group of awardees this year.

One of the founding tenets of IMAC is to constantly strive to be the “friendly conference.” In that spirit, I would like to extend a special welcome to all our new attendees this year. As we continue to sustain and extend our community, you are the future in structural dynamics and its many related fields. As you check in, you will notice that people will be getting banners added to the bottom of their badges indicating their roles at the conference – Session Chair, Advisory Board, First Time Attendee, etc. Those are an easy way to spot people to connect with, either for experienced attendees to reach out to first timers, or for first timers to find wel-

coming leaders in many areas of the conference. A great opportunity is our welcome reception on Monday, please stop by to say hello and meet other new and seasoned attendees.

I also want to encourage everyone, regardless of how long you have attended IMAC, to get involved in organizing the conference. The more engagement and participation we have from the community, the stronger and more engaging we can make IMAC. There are so many opportunities to help shape the current and future conferences, including attending and participating in the Technical Divisions (TDs) at lunch on Tuesday, volunteering with the SEM staff to chair sessions at future conferences, or talking with Advisory Board members about new topics or ideas for the conference. As I already mentioned, another very important contribution that anyone can participate in is nominating key contributors for SEM Awards. Those nominations are due April 15, 2024 for recognition at the 2025 conferences. Please don't hesitate to stop to talk to me or any of the other organizers about any of these. SEM and the IMAC conference organizers are all committed to making this a successful meeting.

Welcome everyone to IMAC-XLII!

**David Epp** | IMAC Conference Director ■

## HIGH-SPEED CAMERAS FOR RESEARCH AND ENGINEERING

### i-SPEED® 7 Series

8,512 fps  
@ 2072 x 1536  
27+ GPixels/s  
throughput  
Up to 288 GB  
RAM

2.45 M fps  
Touchscreen CDUe  
tablet control  
External SSD  
1 hour battery life

### i-SPEED® 5 Series

6,382 fps  
@ 1920 x 1080  
13 GPixels/s  
throughput  
Up to 8 TB  
Internal SSD

1 M fps  
Touchscreen CDUe  
tablet control  
External SSD  
Innovative  
cooling system

### Applications

Ballistics, PIV/DIC, Fluid Dynamics, Shock and Vibration, Material Science, Aerodynamics

# Welcome Message: **Matt Allen**

**On behalf of the** Advisory Board, welcome to the 42nd IMAC in Orlando. I look forward to the opportunity that we have each year to catch up with outstanding colleagues and to learn about the latest work in structural dynamics. For this year's program, we have elected to take time to remember the contributions and leadership of some of the giants who have shaped our field. In particular, two sessions are dedicated to the memory of David J Ewins, who passed away a year ago. This preface is too short to mention even a small fraction of the giants who have shaped our field, such as Lothar Gaul and Roy Craig, as well as the giants who are still with us but have or will soon retire from active involvement.

This year opens with three pre-conference courses on Sunday: Introduction to the Python Programming Language for Structural Dynamics Applications offered by Dan Rohe; Steve Carter; Brandon Zwink from Sandia National Laboratories, An Introduction to Machine Learning and Data Science for Engineers by Lawrence Bull from the University of Cambridge, and Equation- and Data-Driven Nonlinear Model Reduction for Solids, Fluids and Control by George Haller, Shobhit Jain and Bálint Kaszás. We have more than 80 sessions

over four days covering a very broad range of technical topics. Randy Mayes, retired from Sandia National Laboratories, will be presenting our conference keynote entitled "Technical Examples of Building on the Work of Others to Fulfill Your Purpose (With Attributions to David Ewins and other IMAC Colleagues)" and Dan Rohe, also from Sandia National Laboratories, will be presenting the SAGE Publishing Young Engineer Lecture, "A Case for Using Open-Source Software in Structural Dynamics." We also have many tutorial sessions throughout the week on a broad range of topics from Dynamics Environments Testing to Rotor Dynamics and Nonlinear Dynamics. Everyone from undergraduate students to experienced engineers should find interesting topics to learn about and discuss in the program this year.

I hope that you find IMAC to be an engaging and friendly community where you can learn from cutting edge research being done all over the world and present your latest work. We encourage you to join a Focus Group or Technical Division or to talk to the conference organizers about getting involved in other ways. Your participation and ideas are needed to keep IMAC responsive to the needs of the structural dynamics community.

**Matt Allen** | IMAC Advisory Board Chair ■

# correlated

## SOLUTIONS

Experts in Digital Image Correlation

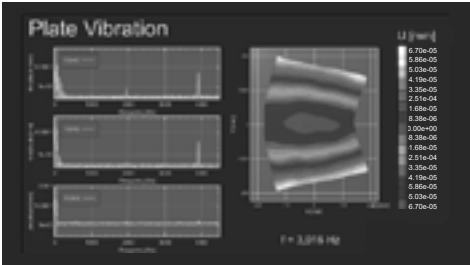

### Advanced Non-Contact Vibration Measurement System

Since the deployment of the VIC-3D High-Speed FFT system in 2014, it has been widely used in industry and academia to measure operational deflection shapes (ODSs) of objects vibrating from an impact or any other type of excitation, including transient. With a large dynamic range and fast computation, the results are displayed as 3D animations with both the in-plane and out-of-plane amplitudes at their corresponding frequencies with nanometer resolution. The data can easily be exported in universal file format (UNV) for further modal analysis, and all *iris* projects can be exported in stunning 4K video resolution.

**LEARN MORE**  
at **BOOTH #211!**

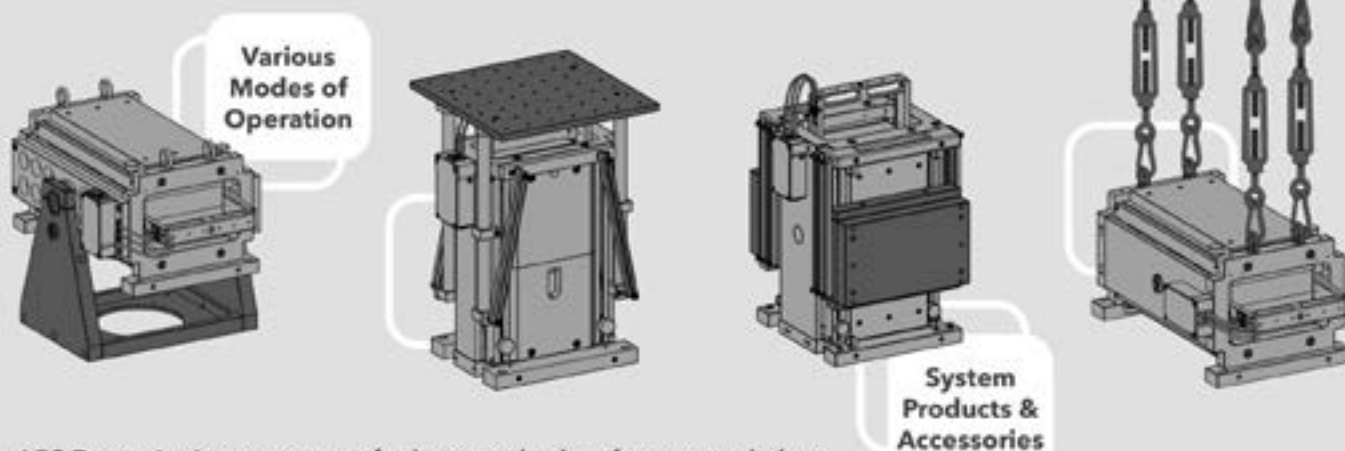

<b>Technology Application Session</b> Salon 10 Tuesday 1/30 - 9 AM	"FFT with DIC: Improvements in Data Processing and Vibration Visualization in VIC-3D"
<b>New/Young Engineer Tutorial</b> Salon 13 Thursday 2/1 - 10 AM	"Measuring Operational Deflection Shapes with Digital Image Correlation"

### Coming in 2024 to VIC-3D version 10

- New FFT vibration workspace allows for the ODS' in-plane and out-of-plane amplitudes to be exaggerated for better visualization of the object behavior (shown left)
- Added capability to compute the frequency response function (FRF) by synchronizing force response data from a modal hammer
- Newly integrated material stress analyzer
- Advanced importing capability of extractions, image & data sequences, analysis settings, Area of Interest (AOI) coordinates, stereo calibration, *iris* projects, and much more.

Over 50 years of specialist expertise.  
**And still innovative.**

APS Dynamics is your partner for long-stroke, low-frequency shakers and systems for structural testing, modal excitation and calibration. You will find suitable amplifiers and special accessories for your application.

# New to IMAC?

**IMAC has something to offer** whether you're a student, recent graduate, in a laboratory, or you're in industry. Panels, sessions, New/Young Engineer Program and networking are just some of the benefits you can expect from attendance.

## Technical Program and Presentations

At most IMACs, there are 7 concurrent rooms holding presentations every 20 minutes. Most rooms will be organized with blocks of presentations on a particular topic or track. While this may seem daunting, there is a method to the madness. Blocks of presentations occur in the early morning, late morning, early afternoon and late afternoon on similar topics (often referred to as "Tracks" or Symposia). Our Final Program and downloadable app, Whova, will have all presentations and meetings listed. Whova is a great resource for searchable content by track, author or specific presentation. Go to [sem.org/imac](http://sem.org/imac) for details.

## New/Young Engineer Program

The field of Modal Analysis continues to evolve and mature. In order to allow new or young engineers in the modal field to extract meaningful information from paper presentations at the IMAC Conference, a program has been developed to familiarize the new/young engineer with some of the very basic material related to modal analysis. Held on the first day of the conference, the Basics of Modal Analysis lecture sessions are geared towards those individuals who have very limited or no experience in the modal field or need a refresher on some of the basic modal nomenclature. The material is centered on the topics of single degree of freedom theory, multiple degree of freedom theory, measurements and parameter estimation. The intent is to familiarize the new/young modal engineer with the nomenclature and basic techniques involved in modal analysis; the most basic fundamental equations will be explained in an overview sense rather than developed from a theoretical standpoint.

## Welcome Reception

Everyone at IMAC-XLII is invited to attend the Welcome Reception. A staple at every IMAC, this reception is a terrific chance to reacquaint yourselves with fellow attendees, students, exhibitors, and guests, as well as meet those who are new. It is a wonderful way to begin the conference.

## Technical Division Lunch

All Technical Division Groups will meet on Tuesday around noon. These gatherings are open to everyone and are a perfect opportunity to discuss area and topic specific content with individuals sharing the same interests. For a full listing of SEM's Technical Divisions, please go to [sem.org/technicaldivisions](http://sem.org/technicaldivisions).

## Networking

Vendors in our Exposition will have their latest technology offerings on display. Network with experts, in hardware and software, that can provide you a competitive edge. Form connections that will last throughout your career and help you along its path.

## Social Event - Howl at the Moon

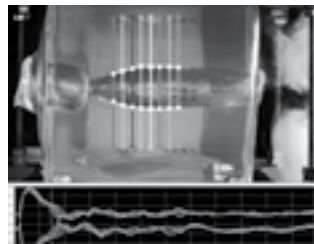

Social events have long been a terrific opportunity for IMAC attendees to share ideas and comradery and we are excited to continue this wonderful tradition. Get together at Howl at the Moon (walking distance from the hotel) and enjoy some cocktails, snacks, and live music while reconnecting and making new IMAC memories! ■

### *ProAnalyst 2023*

*ProAnalyst 2023* is the newest version of Xcitex's flagship software for 1-D, 2-D, and 3-D motion analysis.

- New feature sets
- New licensing options
- New interface
- New tracking algorithms
- Free 7-day trial of all toolkits and features

*ProAnalyst 2023* is a recommended upgrade for all current *ProAnalyst* users.

# Course: Introduction to the Python Programming Language for Structural Dynamics Applications

Sunday, January 28, 2024 | 9:00 a.m. - 6:00 p.m. | Salon 14

## Course Description

Open-Source Tools have become widespread in several scientific disciplines. The free and open-source Python programming language has become a serious competitor to Matlab as a scripting language for performing scientific analyses. There are now several major Structural Dynamics Python packages that are in development or have been released, such as PyFBS, Rattlesnake Vibration Controller, SDynPy, and SDyPy. It is now possible to perform the entire Structural Dynamics workflow using only free and open-source software. Moving Structural Dynamics into open source provides numerous benefits: students can examine code to learn exactly how various algorithms work, researchers can tinker with the code to explore new solutions without having to code everything from scratch, and practitioners can execute their tests or analyses in software that isn't simply a "black box."

This course is designed for current Matlab users (or users with basic proficiency in other programming languages) who are interested in learning Python and how to use some of the Structural Dynamics tools that are available. This course will introduce the basics of the Python programming language with examples motivated by structural dynamics applications. A brief demonstration using Structural Dynamic packages will also be provided. Students are encouraged to attend with their own computers to work along with the tutorials. The instructors will send out instructions for installing the required tools prior to the class, so students can come prepared with the needed software already installed.

Sandia National Laboratories is a multimission laboratory managed and operated by National Technology & Engineering Solutions of Sandia, LLC, a wholly owned subsidiary of Honeywell International Inc., for the U.S. Department of Energy's National Nuclear Security Administration under contract DE-NA0003525.

## Course Instructors

### Dan Rohe

Dr. Daniel Rohe is a Principal Member of the Technical Staff at Sandia National Laboratories. Dan works in the Experimental Structural Dynamics department where he specializes in dynamic characterization testing using non-contact diagnostics and MIMO vibration control. Dan has spent the last few years writing software for structural dynamics applications which have been released open source as the Rattlesnake, a MIMO Vibration Controller, and SDynPy, a Structural Dynamics Python Library.

### Steve Carter

Steven Carter is an experienced NVH and structural dynamics engineer with 10 years of experience in the automotive and aerospace industries. He currently works in the Experimental Structural Dynamics department where he specializes in inverse force estimation and MIMO vibration control. Steve has made significant contributions to the SDynPy Python library in the areas of Transfer Path Analysis and MIMO Vibration.

### Brandon Zwink

Dr. Brandon Zwink currently works with Sandia National Laboratories as an independent contractor and has been studying in structural dynamics since 2007. Brandon worked as a full time Sandian for three years and has been contracting with Sandia for the last 8 years. Brandon recently completed his PhD with Dr. Pete Avitabile at the University of Massachusetts Lowell. Brandon has been using Python and the SDynPy library to solve real world structural dynamics problems, and he has also assisted in development of the SDynPy library by adding functionality and ensuring smooth integration with Apple computers.

## Course Fee

The regular course fee is \$500 and the student fee is \$250. Course fee includes lunches, course handout material, and refreshment breaks. Lodging and additional food or materials are not included.

## Cancellation Liability

If the course is cancelled for any reason, the Society for Experimental Mechanics' liability is limited to the return of the course fees.

*Attendees are encouraged to bring their own laptops. None will be provided.*

## Tentative Schedule

### Introduction – 9:00 a.m.

- Discussion of Open-Source Software
- General overview of the Scientific Python Ecosystem

### Basic Python – 9:30 a.m.

- Python Syntax
- Data Types
- Operators

### Coffee Break – 10:30 a.m.

### Container Data Types and Program Flow – 10:45 a.m.

- Container Objects
- NumPy Arrays
- For and While Loops
- Exceptions

### Functions – 12:15 a.m.

- Function Definition and Usage
- Return Statements
- Argument Unpacking
- Keyword vs Positional Arguments

### Lunch – 1:00 p.m.

### Numerical Calculations with NumPy – 2:00 p.m.

- Indexing
- Broadcasting
- Finding and Using Documentation

### Plotting with Matplotlib – 3:00 p.m.

- Basic Plotting
- Using Subplots

### Coffee Break – 3:30 p.m.

### Interactive Coding Exercise: Computing FRFs from Time Histories – 3:45 p.m.

- Loading Time Data
- Splitting up Data into Frames
- Applying Window Functions
- Computing FFTs
- Computing Power Spectra and Averaging
- Computing H1 Estimator
- Packaging into a Function for reuse
- Function Optimizations and Vectorization

### Structural Dynamics Demonstration with SDynPy and Rattlesnake – 4:30 p.m.

- Load a Pre-test Finite Element Model
- Perform Sensor Optimization
- Modal Test Demonstration
- Mode Fitting
- Comparison to FEM

### Class Released – 6:00 p.m.

# Course: An Introduction to Machine Learning and Data Science for Engineers

Sunday, January 28, 2024 | 9:00 a.m. - 6:00 p.m. | Salon 13

## Course Description

Machine Learning (ML) and data science are having a huge impact on the way modern engineering is being approached. This is due to three important factors: an exponential increase in available data from in-service systems; significant theoretical developments and new algorithms; several programming frameworks which lower the barrier of entry to these new methods. However, engineering applications still pose unique and challenging use cases for ML tasks. This course will focus on the fundamentals of ML which will allow attendees to make informed decisions about the most appropriate ways to apply this new technology to their problems.

## Course Instructor

**Lawrence Bull**

Lawrence is a research associate in the Engineering Dept. at the University of Cambridge, within the Computational Statistics and Machine Learning group. He researches statistical methods for monitoring telemetry data from systems and infrastructure, working closely with the Cambridge Centre for Smart Infrastructure and Construction (CSIC). Previously, he worked at the Alan Turing Institute in the Data-Centric Engineering programme and the Dynamics Research Group at the University of Sheffield.

## Course Fee

The regular course fee is \$500 and the student fee is \$250. Course fee includes lunches, course handout material, and refreshment breaks. Lodging and additional food or materials are not included.

## Cancellation Liability

If the course is cancelled for any reason, the Society for Experimental Mechanics' liability is limited to the return of the course fees.

*Attendees are encouraged to bring their own laptops. None will be provided.*

## Tentative Schedule

The course will focus on example-based seminars with the opportunity to interact with code for each case study.

## Seminars

### 1. What is Machine Learning (ML)?

- ML with an engineering mindset
- Fundamental tasks in ML
- From engineering problems to ML solutions
  - Data exploration, preprocessing, etc.

### 2. Regression (materials tests, wind turbine examples)

- Meaningful regression in engineering
- Linear least squares
  - Not-so-linear bases
  - Controlling complexity and domain expertise
- Maximum likelihood and Bayes's rule
  - A probability primer
  - Thinking generatively
  - Bayes Rule to encode engineering knowledge
- Bayes Linear Regression
  - Conjugate Bayesian linear regression
  - Non-conjugate – discuss don't derive

### 3. Classification (Acoustic emission example)

- Why group data?
- Feature selection and dimensionality reduction
  - PCA and others
- What is similarity and how to measure it?
- The K-nearest-neighbour algorithm
- Gaussian Mixture models
- Logistic regression (if we have time)

### 4. Clustering/Density Estimation (Acoustic emission example)

- What if labels are unknown?
- What is similarity and how to measure it?
- The K-means algorithm for clustering
- Gaussian Mixture Models for clustering
  - Distances link to probabilities
  - The EM method as an extension of K-means

### 5. Advanced Topics

- Semi-parametric models and physics-informed ML
- Semi-supervised approaches to clustering
- Neural Networks and Deep Learning
- Gaussian processes

# Course: Equation- and Data-Driven Nonlinear Model Reduction for Solids, Fluids and Control

Sunday, January 28, 2024 | 9:00 a.m. - 6:00 p.m. | Salon 12

## Course Description

The mechanical systems arising in contemporary science and engineering are growing ever more complex. As a result, the governing equations of these processes are becoming high-dimensional or even unknown. In the latter case, only data-driven modeling is a viable option. For the analysis, prediction, design and control of such equation- or data-defined processes, reduced-order models capturing the core of the underlying physical phenomena are critically important. The most frequently used model reduction methods include modal projection methods, linear approximate models and neural network-based reduction. Each method has its own success stories but also possesses limitations that prevent its general applicability.

Specifically, projection-based models for nonlinear systems are fundamentally heuristic due to their dependence on the linear modes used. Data-driven linear modeling techniques, such as dynamic mode decomposition (DMD) and its variants, are unable to capture characteristically nonlinear phenomena, such as coexisting isolated steady states. Finally, machine learning approaches tend to provide unnecessarily large models that are not interpretable and do not perform well outside their training range.

In this short course, we discuss recently developed, general model reduction techniques that do not suffer from the above shortcomings and provide accurate, low-dimensional reduced models for complex nonlinear systems. This technique is based on the theory of spectral submanifolds (SSMs) that are mathematically rigorous nonlinear continuations of linear modal subspaces in oscillatory systems. We first cover the necessary theoretical background in a format accessible to practitioners and illustrate the strength of SSM-based model reduction on select examples from solid and fluid mechanics.

We then offer a tutorial on practical SSM-reduction for high-dimensional (finite-element-grade) mechanical models via the use of the open source package SSMTTool. Finally, we offer a similar tutorial on extracting SSM-reduced nonlinear models from time-varying numerical and experimental data via the open source package SSMTTool.

## Course Instructors

### George Haller

George Haller is a professor of Mechanical Engineering at ETH Zürich, where he holds the Chair in Nonlinear Dynamics. His prior appointments include tenured faculty positions at Brown, McGill and MIT. He also served as the first director of Morgan Stanley's fixed income modeling center. Professor Haller is a former Sloan Fellow, Thomas Hughes Young Investigator (ASME) and a School of Engineering Distinguished Professor (McGill), as well as current external member of the Hungarian Academy of Science. He serves as associate editor at the Journal of Applied Mechanics, feature editor at Nonlinear Dynamics and senior editor at the Journal of Nonlinear Science. He is an elected fellow of SIAM, APS and ASME.

### Shobhit Jain

Shobhit Jain is an assistant professor of Applied Mathematics at TU Delft. He obtained his undergraduate degree in Mechanical Engineering from IIT Roorkee, his M. Sc. degrees in Mechanical Engineering and Applied Mathematics from TU Delft, and his doctoral degree from ETH Zurich. Shobhit has had industrial stints at several engineering firms, gathering experience in heavy engineering, precision and microsystems engineering, and numerical simulations.

### Bálint Kaszás

Bálint Kaszás earned his Bachelor's and Master's degrees in Physics from Eötvös Loránd University in Budapest, Hungary. He has obtained his Ph.D. from ETH Zurich, where he is currently a postdoctoral fellow in the research group led by George Haller. His research interests include reduced-order modeling and uncertainty quantification applied to fluid mechanical problems.

## Course Fee

The regular course fee is \$500 and the student fee is \$250. Course fee includes lunches, course handout material, and refreshment breaks. Lodging and additional food or materials are not included.

## Cancellation Liability

If the course is cancelled for any reason, the Society for Experimental Mechanics' liability is limited to the return of the course fees.

*Attendees are encouraged to bring their own laptops. None will be provided.*

# **Keynote: Randy Mayes**

## **Technical Examples of Building on the Work of Others to Fulfill Your Purpose**

(With Attributions to David Ewins and other IMAC Colleagues)

Monday, January 29, 2024 | 11:30 a.m. - 12:30 p.m | Ballroom CD

### **Abstract**

The theme "Standing on the Shoulders of Giants" is explored over my structural dynamics career. Some sage technical and philosophical advice from one of the giants of modal testing, David Ewins, is included to provide a technical boost to early career experimentalists. The history of building upon the work of several IMAC colleagues is related in the career-long use and exploration of the modal filter. This amazing principle has provided technical advancement and understanding in the sub-disciplines of force reconstruction, modal parameter estimation, experimental dynamic substructuring, non-linear analysis and impedance matched multi-axis test planning. The conclusion is stimulated once again from a David Ewins premise. I extend this to the listener in an exhortation of purpose. When this pilgrim looks back over a long career, he can clearly see mileposts of purpose that were not as evident when they were originally passed.

### **Biography**

Randy Mayes began his structural dynamics career as a finite element analyst using NASTRAN in 1979 at Sandia National Laboratories. He moved into the modal testing group in 1989 where he worked until retirement in 2020. He has always enjoyed the friendly IMAC conference of SEM. An ElliptiGO stand-up bicycle and a classical guitar provide great hobbies. His favorite paraphrased scripture from the book of James is "Count it a joyous opportunity when you have an interruption or obstacle to your plans. As you patiently watch God work it out, He will change you into a fantastic person". ■

# SAGE Publishing Young Engineer Lecture: **Daniel Rohe**

## A Case for Using Open-Source Software in Structural Dynamics

Tuesday, January 30, 2024 | 11:30 a.m. - 12:30 p.m | Ballroom CD

### Abstract

With the conference theme of “Standing on the Shoulders of Giants”, we recognize that as researchers and practitioners, our contributions to the field of Structural Dynamics are often incremental, building off the ideas and contributions of those who came before us. The concept of building from previous successes is heavily reliant on having access to those previous successes, so they can be implemented, analyzed, and improved. While this concept is prevalent in publishing research, one could argue that the same concept should be prevalent in the software we use for that research. Fortunately, open-source tools are becoming widespread in several scientific disciplines. The free and open-source Python programming language has become a serious alternative to MATLAB as a scripting language for performing scientific analyses, and there are now several major Structural Dynamics Python packages that are in development or have been released, such as PyFBS, Rattlesnake Vibration Controller, SDynPy, and SDyPy. It is now possible to perform the entire Structural Dynamics workflow using only free and open-source software. Moving Structural Dynamics into open source has the potential to provide numerous benefits: students can examine code to learn exactly how various algorithms work, researchers can tinker with the code to explore new solutions without having to code everything from scratch, and practitioners can execute their tests or analyses in software that isn't simply a “black box.” This lecture will make a case for moving structural dynamics into the open-source domain, presenting several successful open-source projects and success stories from using open-source tools.

### Biography

Dan Rohe is a Principal Member of the Technical Staff at Sandia National Laboratories. He works in the Experimental Structural Dynamics department where he specializes in dynamic characterization testing using non-contact diagnostics and MIMO vibration control. Dan has spent the last few years writing software for structural dynamics applications which have been re-

leased open source as Rattlesnake, a MIMO Vibration Controller, and SDynPy, a Structural Dynamics Python Library. Dan received his Undergraduate and Master's degree at the University of Wisconsin under Professor Matt Allen, and his Ph.D. from the University of Massachusetts Lowell under Professors Zhu Mao and Pete Avitabile. ■

**The SAGE Publishing** Young Engineer Lecture recognizes a member of SEM in early to mid-career (generally 5 to 10 years after degree receipt) whose work demonstrates considerable potential in the field of Experimental Mechanics.

The Society has a number of awards which, by their nature, are intended to recognize senior members of the Society for their work in Experimental Mechanics. How-

ever, it is also important that the Society recognize members early in their career whose work demonstrates considerable potential in the field of Experimental Mechanics. That is the focus of this lecture.

As with all SEM awards, we strongly solicit nominations from the members of the Society and the IMAC community for this lecture. The nominee should be recognized for the potential of work early in his/

her career, and should be a member of the Society. On the academic side, this could be someone at the Assistant or Associate Professor level. On the industrial or Government Lab side, it could be someone up to 10 years after hire. These are only guidelines and not absolute rules.

Please visit [www.sem.org/awards](http://www.sem.org/awards) to learn more about nominating a person for this award. ■

# Technical Divisions (TD) Committee Meetings

Tuesday, January 30, 2024 | 12:30 p.m - 2:00 p.m. | Ballroom CD

## Participate in SEM Technical Divisions and Get the Most out of your Membership

The SEM Technical Divisions are the grass-roots building blocks of the Society for Experimental Mechanics. These divisions meet formally and informally at various Society events, address current practices and prepare action plans for communicating the activities in their technical area to the rest of the Society, and to groups outside the Society. This is very often accomplished by organization of technical sessions at SEM Conferences. Many of the SEM Technical Divisions have had a significant impact on SEM Con-

ference Programs on a regular basis, i.e. Composite, Hybrid and Multifunctional Materials, Dynamic Behavior of Materials, MEMS and Nanotechnology at the SEM Annual Conferences and Modal Analysis/Dynamic Systems at IMAC.

Please plan to attend the Technical Committee Meetings scheduled at IMAC-XLII. Refer to the chart on opposite page to determine which Technical Division you may be interested in and then check the schedule for meeting time. *NOTE: TDs highlighted in blue will meet at SEM Annual 2024.* ■

**12:30 p.m in Ballroom CD for pizza and information. At about 1:00 p.m. - move to the rooms listed below for TD Meetings.**

### Computer Vision and Laser Vibrometry (Salon 11)

All IMAC attendees eager to know more about the optical methods and computer vision technology and its application are invited to join the Technical Division meeting. The Technical Division also welcomes volunteers for organizing or chairing sessions in this track. The Technical Division on Computer Vision and Laser Vibrometry aims to share knowledge on advances in the area of optical measurement techniques that are applied to the area of dynamic measurements. This technical division organizes presentations that use optical techniques for operating data measurement, modal parameter estimation, model updating, full field dynamic strain extraction, damage detection, and high-speed deformation measurement.

### Data Science (Salon 7)

The Data Science Technical Division needs your involvement! The TD's charter is to advocate for Data Science within SEM and the engineering community at-large, develop educational opportunities, support young professionals, and encourage practitioners and researchers to present their work. IMAC attendees are encouraged to attend the TD meeting. Everybody is welcome! The TD meeting is an opportunity to propose technical sessions and tutorials for the next IMAC (2025), suggest panel discussion and training events, discuss outreach opportunities. The TD will also solicit ideas for activities that would be beneficial to IMAC and SEM. The meeting is a great way to connect and network with IMAC attendees who share similar interest in Data Science.

### Dynamic Environments Testing (Salon 10)

The purpose of this technical division is to expand upon the exciting research being done for dynamic environments testing and help to evolve advanced test techniques across both the research community and industry. Join us to discuss technical developments of the emerging methods, learn about the latest collaboration efforts underway on the Dynamics Environments Testing round robin test bed (BARC), and help us pave a path forward for future research via new challenge problems and/or test benches. We invite anyone with an interest, curiosity, or need for dynamic environments testing to join this group and participate in this exciting research—together we can help shape the future of dynamics testing!

### Dynamic Substructures (Salon 8)

The Technical Division on Dynamic Substructures, is eagerly organizing sessions, keynote talks and activities of interest for both analytical and experimental substructuring. During a lunchbreak at IMAC, the annual meeting will be held. We meet to organize sessions, pre-conference courses, keynote talks and panel discussions for the next IMAC conference and to coordinate efforts on benchmark systems. All interested and curious persons are welcome to attend. For more information see: [www.sem.org/tdsubstructures](http://www.sem.org/tdsubstructures).

### Dynamics of Civil Structures (Salon 12)

The Dynamics of Civil Structures TD is established to address the needs of its SEM community members working on civil structures and to improve structural sustainability and resiliency, safety,

*continued on next page*

# Technical Divisions (TD) Committee Meetings *(cont)*

Tuesday, January 30, 2024 | 12:30 p.m - 2:00 p.m. | Ballroom CD

serviceability, and human-infrastructure interaction issues in the larger civil engineering professional community and related technical disciplines. The TD holds its annual meeting during IMAC highlighting the significant technical content and TD members' conference activities devoted to the study of civil structures under dynamic loads. The TD provides a unique multidisciplinary forum to disseminate and exchange information on new research and technical developments in the design, analysis, testing, monitoring, and assessment of civil structures.

TD goals include the identification of critical research needs, the validation and dissemination of emerging methods and promising technologies and growing the research and professional community that address the unique demands of the civil structures. Conference activities of the TD include organization of special sessions, program tracks, and short courses among others.

New members and conference participants are welcome to attend the TD annual meeting.

## Modal Analysis and Structural Dynamics (Salon 13)

IMAC attendees interested in promoting modal analysis and dynamic systems activities within SEM are welcome to attend the annual meeting of this Technical Division. This TD is constantly seeking new ideas and volunteers to participate in activities which will further the scientific and educational knowledge of modal analysis and other aspects of dynamic systems. The Modal Analysis and Dynamic Systems TD has sponsored the Basics of Modal Analysis for the New/Young Engineer program for many years.

This TD has also developed and sponsored several special sessions and programs over the years such as Dynamic Environments Testing, Laser Vibrometry, Optical Methods, and several others. If you have ideas for special sessions or programs at IMAC bring your ideas to this meeting.

At this year's meeting, we will be making plans for IMAC 2025, the 43rd anniversary of the conference. In addition to plans for 2025, we will also be discussing how this Technical Division can serve all engineers and technicians working in the field by being a source of knowledge and information. Once again, all are welcome to attend. Please bring us your ideas.

## Model Validation & Uncertainty Quantification (Salon 9)

Model Validation and Uncertainty Quantification (MVUQ) refers to a broad range of activities carried out to provide evidence that measurements and predictions are credible and scientifically defensible.

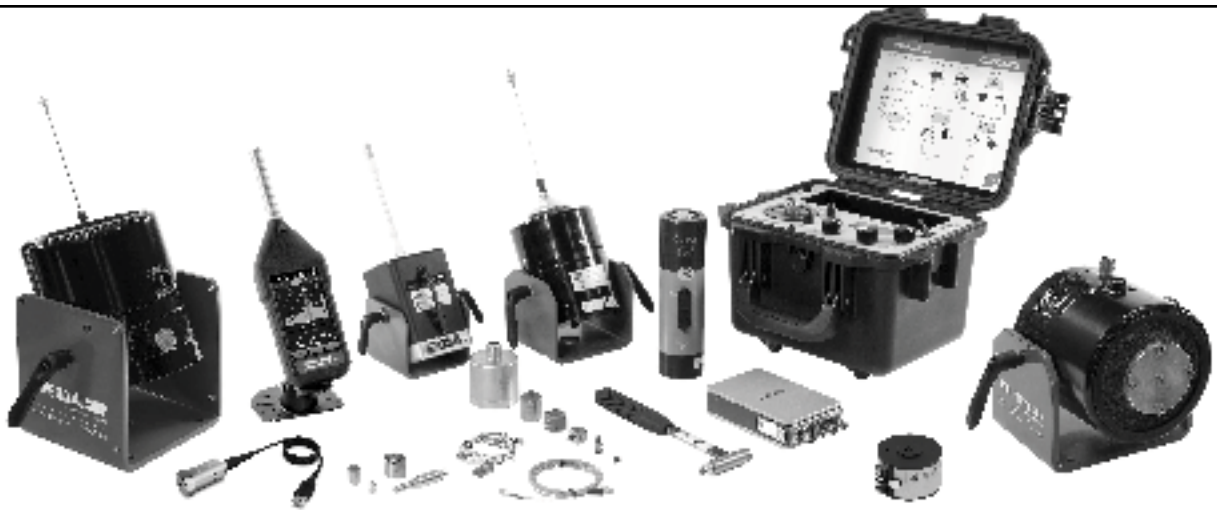

The purpose of the MVUQ Technical Division at the Society for Experimental Mechanics (SEM) is to advance the capabilities and disseminate knowledge of MVUQ methods with an emphasis on Structural Dynamics. Among the goals of the Technical Division is an aim to broaden the impact of MVUQ practices incorporating all stakeholders, from industry to academia, to ensure that MVUQ practices continue to grow and mature in a manner that benefits all. Over the past years, the TD has been very active in organizing technical sessions and tutorials at SEM conferences and awards an MVUQ Best Paper Award during IMAC. All who share our interest for MVUQ, especially the presenters and audience in this year's MVUQ sessions are welcome to attend the meeting, join the TD, and help to define its role and mission.

## Nonlinear Structures & Systems (Salon 14)

All interested people are welcome to join the Nonlinear Structures and Systems Technical Division (TD) officers to organize the tutorials and sessions for the next IMAC conference and discuss the division's future. This year, we will also hold elections for the role of Chair, Vice-Chair, and Secretaries of the TD for the next three years.

## Jim F. Lally Sensors and Instrumentation (Green Room)

We encourage all that have an interest or want to learn more about the Sensor and Instrumentation technical division to attend our annual planning meeting. At this year's meeting we will again evaluate recurring session topics and encourage new participants to join us to submit their session ideas for future IMACs. Engineers and technicians of all disciplines are welcome to attend, participate, and collaborate on sessions and topics that are significant to the application and measurements of dynamic structures. ■

# MODAL TESTING SOLUTIONS ON DEMAND

## Open Meetings

### Meeting of the International Committee on Joint Mechanics

Monday, January 29, 2024 | 6:15 p.m. - 7:00 p.m. | Salon 7

All interested people are welcome to join the International Committee on Joint Mechanics for our annual committee meeting. The agenda will focus on a debrief from the Fifth International Workshop (held in September 2023), updates on the action items for the committee, organization of the mini-workshops throughout the spring, dissemination of information for the summer research camps, and opportunities to become involved.

### Experimental Techniques Editorial/IAB Meeting

Monday, January 29, 2024 | 2:30 p.m. - 3:30 p.m. | Salon 7

### Applications, Education and Research Committees Joint Meeting

Tuesday, January 30, 2024 | 9:30 a.m. - 11:30 a.m. | Salon 7

Join us for discussion on topics relevant to IMAC and SEM Annual conferences. This joint meeting of the committees will cover topics on Education: student symposia and students, including the newly implemented student ambassador program; Applications: a forum for individuals doing work on a practical level; and Research: a forum for research topics, both novel and works in progress. Bring your ideas and help guide topics and themes for future conferences.

### Exhibit Planning Committee

Tuesday, January 30, 2024

1:30 p.m. - 2:30 p.m. | Ballroom AB

All exhibitors are invited to attend this open meeting to discuss opportunities, provide valuable insight/feedback, and guide future Exposition planning. Your participation is critical in making the Exposition a success and in providing the best experience for conference attendees.

### Program Planning Committee

Wednesday, January 31, 2024

9:00 a.m. - 10:30 a.m. | Salon 7

The committee will meet to receive IMAC-XLII feedback from Technical Divisions, Focus Groups, and others as well as to discuss plans for IMAC-XLII. **Each Technical Division and Focus Group is asked to send a representative to this meeting if possible.** If not possible, please BE SURE to return your TD/Focus Group form to the IMAC registration desk **prior** to this meeting. ■

### IMAC-XLII Welcome Reception

Monday, January 29, 2024

7:00 p.m. - 8:30 p.m. | Ballroom AB

Everyone at IMAC-XLII is invited to attend the Welcome Reception. A staple at every IMAC, this reception is a terrific chance to reacquaint yourself with fellow attendees, students, exhibitors, and guests, as well as meet those who are new. It is a wonderful way to begin the conference.

### STUDENT MEET & GREET

Monday, January 29, 2024

6:15 p.m. - 7:00 p.m. | Mezzanine

All students are invited to this casual gathering to meet up and share some light bites and drinks before the Welcome Reception.

## Closed Meetings

### SEM Executive Board Meeting

Sunday, January 28, 2024 | 9:00 a.m. - 3:00 p.m. | Salons 9-10

### IMAC Advisory Board Meeting

Monday, January 29, 2024 | 12:30 p.m. - 2:00 p.m. | Salon 7

## IMAC-XLII SOCIAL EVENT

All registered attendees at IMAC-XLII are invited to attend an evening of fun at Howl at the Moon.

Social events have long been a terrific opportunity for IMAC attendees to share ideas and comradery and we are excited to continue this wonderful tradition. Let's get together and enjoy some cocktails, snacks, and live music while reconnecting and making new IMAC memories!

**Wednesday, January 31, 2024**

**7:00 p.m. - 10:00 p.m.**

Howl at the Moon Orlando is located at 8815 International Dr., Orlando, FL  
(walking distance from the Rosen Plaza Hotel)

# Awards

## 2024 Awards and Recipients

**SEM Fellows:** Michael Todd

**SAGE Publishing Young Engineer Lecture:** Daniel Rohe

**D. J. DeMichele:** James C. Akers

## SEM Gold and Silver Certificate Members

The following SEM members have reached a Silver or Gold membership milestone. We sincerely thank them for their years of service and dedication to SEM. Seeing these certificates awarded is a wonderful way to show our appreciation to these longstanding SEM members.

### 50 Year Members | Gold Certificate

Rodolfo Rasia  
Hirosh Uozatou

### 25 Year Members | Silver Certificate

Paul Gloeckner  
Federico Sciammarella  
Sigmund Stepaniak  
Michael Todd

## All Society Awards Luncheon

**Wednesday, January 31, 2024**

**1:10 p.m. - 2:40 p.m. | Ballroom CD**

IMAC Conference Director, David Epp, will conduct the Awards Luncheon ceremony by presenting various awards in recognition of outstanding achievements and service to SEM/IMAC.

## 2024 Best Papers

### Computer Vision & Laser Vibrometry

*sponsored by Polytec and Correlated Solutions, Inc.*

**1st Place:** Tengjiao Jiang–Norwegian University of Science and Technology; Gunnstein Frøseth–Norwegian University of Science and Technology; Anders Rønquist–Norwegian University of Science and Technology  
*For the paper #16586 - "A Six-Degree-of-Freedom Camera Motion Correction Method Based on Inertial Measurement Unit and Data Fusion"*

**2nd Place:** Andre Green–Los Alamos National Laboratory; Moises Mello da Silva–Los Alamos National Laboratory; Alessandro Cattaneo–Los Alamos National Laboratory; David Mascarenas–Los Alamos National Laboratory  
*For the paper #16604 - "3D Mode-Shape Extraction through Event-Based Light Fields"*

**3rd Place:** Ke Yuan–University of Maryland Baltimore County; Weidong Zhu–University of Maryland Baltimore County  
*For the paper #16721 - "Panoramic 3D Operating Deflection Shape Measurement of a Cylindrical Structure using a Mirror-Assisted 3D CSLDV System"*

### Data Science

*sponsored by Los Alamos Dynamics, LLC*

Aidan Hughes–University of Sheffield; Jack Poole–University of Sheffield; Nikolaos Dervilis–University of Sheffield; Paul Gardner–Frazier-Nash Consultancy; Keith Worden–University of Sheffield  
*For the paper #17020 - "Quantifying the Value of Information Transfer in Population-based SHM"*

### Dynamic Environments Testing

Cora Taylor–Michigan Technological University; Jason Blough–Michigan Technological University; James DeClerck–Michigan Technological University; Chuck VanKarsen–Michigan Technological University; Raymond Joshua–Honeywell, Kansas City National Security Campus  
*For the paper #16612 - "PDADyE Applied to a 2-attachment Fixture Case"*

### Dynamics of Civil Structures

Yiwen Dong–Stanford University; Jingxiao Liu–Stanford University; Sung Eun Kim–Lucile Packard Children's Hospital; Kornél Schädler–Lucile Packard Children's Hospital; Jessica Rose–Lucile Packard Children's Hospital; Hae Young Noh–Stanford University  
*For the paper #16682 - "Graphical Modeling of the Lower-Limb Joint Motion from the Dynamic Floor Responses under Footstep Forces"*

### Model Validation & Uncertainty Quantification

*sponsored by Los Alamos Dynamics, LLC*

Antonios Kamariotis–ETH Zürich; Eleni Chatzi–ETH Zürich  
*For the paper #17047 - "Bayesian Decision-theoretic Model Selection for Monitored Systems"*

### Nonlinear Structures and Systems

Mihai Cimpuiaru–University of Michigan, Ann Arbor; Alexander Kripfgans–University of Michigan, Ann Arbor; Sean Kelly–University of Michigan, Ann Arbor; Bogdan Epureanu–University of Michigan, Ann Arbor  
*For the paper #16529 - "Additive Manufacturing of Resonant Vibration Absorbers for Turbomachinery Blisks"*

## Use Your Cell Phone to Capture Vibration

Everyone has a cell phone in their pocket. Now you can use yours to record a video of machinery or structural vibration.

And with a portable computer and MEScope Video ODS, you can examine the vibration on the spot, in the plant or field.

**MEscope**

 **VIBRANT**

# TECHNICAL PROGRAM MONDAY (MORNING) | JANUARY 29, 2024

CHAIR(S) SESSION TRACK	SALON 8	SALON 9	SALON 10
	DYNAMIC SUBSTRUCTURES	ADDITIVE MANUFACTURING	MODAL ANALYSIS & STRUCTURAL DYNAMICS
	01. LINEAR JOINTS AND COUPLING	02. ADDITIVE MANUFACTURING	03. MODAL & ACOUSTIC CHARACTERIZATION
	Annalisa Fregolent—Università di Roma La Sapienza; Nevzat Özgüven—Middle East Technical University	James De Clerck—Michigan Technological University;	Joel Sills—NASA; Greta Colford—University of Michigan
9:00 a.m.	Experimental Substructuring for Linear and Nonlinear Connection Dynamics: A Tutorial (Part 1) #16482   Daniel J. Rixen—Technical University of Munich	A 3D-Printed Paradigm Shift in Self-aware Smart Structures Fabrication #16791   Tilen Košir—University of Ljubljana; Janko Slavič—University of Ljubljana	Tips, Tricks, and Obscure Features for Modal Signal Processing #16779   William A. Fladung—ATA Engineering, Inc.; Kevin L. Napolitano—ATA Engineering, Inc.
9:20 a.m.		Damping Behavior of Trapped Powder in Additively Manufactured Steel Beams #16442   Jonathan K. Black—Brigham Young University; Sam Teng—Brigham Young University; Jacob Capito—Brigham Young University; Matthew S. Allen—Brigham Young University; Tracy Nelson—Brigham Young University; Nathan Crane—Brigham Young University	Effects of Rarefied Atmosphere on Radiation Damping in an Aluminum Euler Beam #16933   Joshua T. Mills—Brigham Young University; Peter K. Jensen—Brigham Young University; Micah R. Shepherd—Brigham Young University
9:40 a.m.		Dynamics of Additively-Manufactured Beams and the Influence of Static Position on the System's Nonlinear Behaviors #16783   Micah Cheng-Guajardo—New Mexico State University; Nicholas Hall—New Mexico State University; Trey Swan—New Mexico State University; Christopher Padilla—New Mexico State University; Matthew Vinsonhaler—New Mexico State University; Abessattar Abdelkefi—New Mexico State University	Leveraging Phase-Based Motion Magnification for Noise Source Identification in Pressure Exchangers #16950   Cengizhan Taslicay—Rice University; Drithi Shetty—Rice University; Jagadish Janardhan—Flowserve Corporation; Matthew Brake—Rice University
10:00 a.m.	Estimating Linear Joint Stiffness and Damping using a Frequency-Based Optimization Framework and the Emerging Concept of DyDis #16607   Marie Brans—Technical University of Denmark/Technical University of Munich; Francesco Trainotti—Technical University of Munich; Daniel J. Rixen—Technical University of Munich	Influence of the 3D Printing Parameters on the Dynamic Characteristics of Composite Structures #17048   Ali Raza—Kaunas University of Technology	Identification of Bird Species in Large Multi-channel Data Streams using Distributed Acoustic Sensing #16978   Andrew Jensen—Stanford University; William Redford—Georgia Institute of Technology; Nimran Shergill—Yale University; Carly Donahue—Los Alamos National Laboratory; Luke Beardslee—Los Alamos National Laboratory
10:20 a.m.	Comparing Different Interface Descriptions for Joint Identification using Dynamic Substructuring #16893   Jacopo Brunetti—Università degli Studi dell'Aquila; Walter D'Ambrogio—Università degli Studi dell'Aquila; Matteo Di Manno—Università degli Studi di Roma La Sapienza; Annalisa Fregolent—Università degli Studi di Roma La Sapienza		Estimation of Acoustic Emission Arrival Time in Concrete Structures Using Convolutional Neural Network #16838   Omair Inderyas—Ege University; Ninel Alver—Ege University; Aydin Kaya—Hacettepe University; Ulas Bagci—Northwestern University
10:40 a.m.	Expansion Techniques in the Modal Domain: Practical Implementation of M-SEMM and Comparative Study with SEREP #16640   Miha Pogačar—University of Ljubljana; Gregor Čepan—University of Ljubljana; Miha Boltežar—University of Ljubljana		
11:00-11:30 a.m.	Coffee Break—Ballroom Foyer		
11:30-12:30 p.m.	Keynote: Randy Mayes—Sandia National Laboratories—Ballroom CD		
12:30-2:00 p.m.	Lunch—On Own		
12:30-2:00 p.m.	Closed IMAC Advisory Board Meeting—Salon 7		

Full detailed event schedule available on the Whova app.

SALON 11		SALON 12		SALON 13		SALON 14	
AEROSPACE		DYNAMICS OF CIVIL STRUCTURES		BASICS OF MODAL ANALYSIS		NONLINEAR STRUCTURES & SYSTEMS	
04. AEROSPACE I		05. STRUCTURAL HEALTH MONITORING I		06. MODAL ANALYSIS FOR THE NEW/YOUNG ENGINEER I		07. NONLINEAR VIBRATION FUNDAMENTALS	
Eric Stasiunas—NASA - Marshall Space Flight Center; Kevin Napolitano—ATA Engineering		Kirk Grimmelsman—FDH Infrastructure Services; Knut Andreas Kvåle—Norwegian University of Science and Technology		Jon Furlich—ATA Engineering; Brandon Dilworth—MIT Lincoln Laboratory		Matthew Brake—Rice University	
Noncontact Modal Testing of Structures with Closely Spaced Modes Using Multireference Impact Testing and Scanning Laser Vibrometry #16973   Benjamin L. Martins—ATA Engineering, Inc.; Joseph M. Jaeckels—ATA Engineering, Inc.		A Data Set from Response and Load Monitoring of a Steel Bridge Subject to Imposed Damage for Damage Detection and Structural Health Monitoring #16749   Bjørn T. Svendsen—Norwegian University of Science and Technology; Gunnstein T. Frøseth—Norwegian University of Science and Technology; Ole Øiseth—Norwegian University of Science and Technology; Anders Rønnequist—Norwegian University of Science and Technology		Single and Multiple Degree of Freedom Theory #17187   Chad M. Walber—Michigan Technological University		Tutorial: Fundamentals of Nonlinear Oscillations #16956   Paolo Tiso—ETH Zürich	
Vibration Analysis of Morphing Wings #16506   Derek J. Willis—University of Michigan; Daniel J. Inman—University of Michigan		Operational Modal Analysis of a Pedestrian Bridge Using Ultra-Sensitive Wireless Accelerometers Under Different Structural Scenarios #17070   Furkan Luleci—University of Central Florida; Abdulrahman Alqadi—University of Central Florida; Matthieu Perrault—Sercel; Laurent Guenineau—Sercel; Necati Catbas—University of Central Florida					
An Enhanced Study of an Acoustic Damage Detection Method for Unmanned Aircraft #16776   William Semke—University of North Dakota; Djedje-Kossu Zahui—University of North Dakota; Clement Tang—University of North Dakota		Performance Evaluation of Light Pole Structures through SHM #17054   David Zambrano—FDH Infrastructure Services; Kirk A Grimmelsman—FDH Infrastructure Services					
Operational Modal Analysis of the Artemis I Dynamic Rollout Test and Wet Dress Rehearsal #16581   James C. Akers—NASA GRC; James P. Winkel—NASA LaRC; Alexander W. Chin—NASA LaRC; Russel A. Parks—NASA MSFC; Dana E. Chandler—NASA MSFC; Eric C. Stasiunas—NASA MSFC; Matthew S. Allen—ATA Engineering		An Investigation of Common Damage Types for Marine Structures in the Context of Structural Health Monitoring #16748   Bjørn T. Svendsen—Ramboll Energy/Norwegian University of Science and Technology; Niels Døllerup—Ramboll Energy					
Strain-Data Driven Force Reconstruction Using Pseudo-Inverse Matrix #16784   Aditya Panigrahi—The University of Texas at Austin; Alexander Q. Nguyen—The University of Texas at Austin; Marc A. Eitner—The University of Texas at Austin; Jayant Sirohi—The University of Texas at Austin		Keynote: On the Role of Structural Monitoring and Structural Health Monitoring in Asset Management and Improved Design of Bridges #18031   Ole A. Øiseth—Norwegian University of Science and Technology; Øyvind W. Petersen—Norwegian University of Science and Technology; Gunnstein T. Frøseth—Norwegian University of Science and Technology; Anno C. Dederichs—Norwegian University of Science and Technology; Aksel Fenerci—Norwegian University of Science and Technology; Bjørn T. Svendsen—Norwegian University of Science and Technology; Gabriel A. del Pozo—Norwegian University of Science and Technology; Knut A. Kvåle—Norwegian University of Science and Technology; Anders Rønnequist—Norwegian University of Science and Technology				More than Joints - Prof. Lothar Gaul's Contributions to IMAC #16555   Kai I. Willner—FAU Erlangen-Nuremberg	
						Hyper-Reduced and Very Efficient Consideration of Small Sliding Contact in Arbitrarily Fined Meshed FE Models of Jointed Structures #16504   Wolfgang Witteveen—Upper Austria University of Applied Sciences; Lukas Koller—Upper Austria University of Applied Sciences	
						Nonlinear Wave-Based Vibration Approach for Analytical Determination of Periodic Solutions and Stability in Jointed Bars, Beams, and Frames #16500   Michael J. Leamy—Georgia Tech; Nidish N. Balaji—University of Stuttgart; Matthew R. Brake—Rice University	
Coffee Break—Ballroom Foyer							
Keynote: Randy Mayes—Sandia National Laboratories—Ballroom CD							
Lunch—On Own							
Closed IMAC Advisory Board Meeting—Salon 7

# TECHNICAL PROGRAM MONDAY (AFTERNOON) | JANUARY 29, 2024

CHAIR(S)	SESSION TRACK	SALON 8	SALON 9	SALON 10
		DYNAMIC SUBSTRUCTURES	MODEL VALIDATION & UNCERTAINTY QUANTIFICATION	MODAL ANALYSIS & STRUCTURAL DYNAMICS
		08. NONLINEAR JOINTS AND COUPLING	09. UNCERTAINTY QUANTIFICATION IN DYNAMICS	10. SUBSTRUCTURE
		Daniel Rixen— <i>Technische Universität München</i> ; Jacopo Brunetti— <i>University of L'Aquila</i>	Babak Moaveni— <i>Tufts University</i> ; Costas Papadimitriou— <i>University of Thessaly</i>	TBA
2:00 p.m.		Experimental Sub-structuring for Linear and Nonlinear Connection Dynamics: A Tutorial (Part 2) #17178   H. Nevzat Özgüven— <i>Middle East Technical University</i>	A Structured Knowledge Graph for a Geometric and Behavioral Digital Twin in the Context Of Modal Testing #16658   Xiaoxue Shen— <i>University of Sheffield</i> ; Prajwal Devaraja— <i>University of Sheffield</i> ; David Wagg— <i>University of Sheffield</i> ; Matthew Bonney— <i>Swansea University</i>	Strain-based Damage Localization on Plate Structures using Cross-domain Hybrid Expansion Method #16897   Brett C. Daniels— <i>University of Massachusetts Lowell</i> ; Alessandro Sabato— <i>University of Massachusetts Lowell</i> ; Peter Avitabile— <i>University of Massachusetts Lowell</i> ; Raymond Joshua— <i>Kansas City National Security Campus</i>
2:20 p.m.			Uncertainty Quantification of Bending Moments with Characterization of Strain Measurement Error on Offshore Wind Turbines #16969   Eleonora Tronci— <i>Northeastern University</i> ; Anna Haensch— <i>Tufts University</i> ; Georgios Georgalis— <i>Tufts University</i> ; Babak Moaveni— <i>Tufts University</i>	Influences of Bolt Location, Torqueing, and Lifetime on Dynamical Characteristics of Bolted Joint Structures #16668   Tharwat Elkabani— <i>New Mexico State University</i> ; Andres Jiede— <i>New Mexico State University</i> ; Abdessattar Abdelkefi— <i>New Mexico State University</i>
2:30-3:30 p.m.		Experimental Techniques Editorial/IAB Meeting—Salon 7		
2:40 p.m.			Continuous Monitoring of the First Two Offshore Wind Farms in the US #17058   Babak Moaveni— <i>Tufts University</i> ; Eric Hines— <i>Tufts University</i>	Exploring Modal Analysis for Characterizing Impact of Making Process on the Properties of Woods used in Musical Instruments #16497   Romain Viala— <i>Institut Technologique Européen des Métiers de la Musique</i> ; Jérémy Cabaret— <i>Institut Technologique Européen des Métiers de la Musique</i>
3:00 p.m.		Linear Joint Identification for Frictional Rotor Shaft-to-Hub Connections using Frequency-Based Substructuring #16808   Michael Kreutz— <i>Technical University of Munich</i> ; Daniel J. Rixen— <i>Technical University of Munich</i>	Universal Upper Estimate for Prediction Errors Under Moderate Model Uncertainty #16812   Bálint Kaszás— <i>ETH Zurich</i> ; George Haller— <i>ETH Zurich</i>	Reconstruction of Unsteady Lift Force Measurements using Non-Dimensional Scaling Optimization #16481   Zachary T. Jones— <i>Pennsylvania State University</i> ; Nicholas A. Vlacjic— <i>Pennsylvania State University</i>
3:20 p.m.		Iterative Coupling of Multiple Moderate Nonlinear Numerical and/or Experimental Subsystems via FRFs #16502   Wolfgang Witteveen— <i>Upper Austria University of Applied Sciences</i> ; Lukas Koller— <i>Upper Austria University of Applied Sciences</i>	Unveiling New Insights for Uncertainty Propagation in Frequency-based Substructuring #16923   Javier del Fresno Zarza— <i>KU Leuven</i> ; Francesco Trainotti— <i>Technische Universität München</i> ; Frank Naets— <i>KU Leuven</i>	
3:40 p.m.		Nonlinear Subcomponent Attachments for the Technical Division on Dynamic Substructuring Benchmark Structure #17027   Daniel R. Roettgen— <i>Sandia National Labs</i> ; Benjamin Moldenhauer— <i>Sandia National Labs</i> ; Andreas Linderholt— <i>Linneaus University</i>		
4:00-4:30 p.m.		Coffee Break—Ballroom Foyer		

Full detailed event schedule available on the Whova app.

CHAIR(S)	SESSION TRACK	SALON 8	SALON 9	SALON 10
		DYNAMIC SUBSTRUCTURES	MODEL VALIDATION & UNCERTAINTY QUANTIFICATION	HIGHLIGHTS
		22. ROUND ROBIN TEST BED Dan Roettgen—Sandia National Laboratories; Andreas Linderholt—Linnaeus University	23. MODEL FORM UNCERTAINTY INCL. ROUND ROBIN CHALLENGE Roland Platz—Deggendorf Institute of Technology; Alana Lund—University of Waterloo	24. TECHNOLOGY APPLICATIONS I Chad Walber—Michigan Technological University; Matthew Stefanski—U.S. Air Force Research Laboratory
9:00 a.m.		Validated Finite Element Models Representing Components Building up the Technical Division's Substructuring Benchmark Structure. #16579   Andreas K. Linderholt—Linnaeus University	Tutorial and Application of Bayesian Statistics on Assessing Model Form Uncertainty in Vibration Isolation #16938   Roland Platz—Deggendorf Institute of Technology	FFT with DIC: Improvements in Data Processing and Vibration Visualization #16617   Bluejay Robinson—Correlated Solutions, Inc.; Alistair Tofts—Correlated Solutions, Inc.
9:20 a.m.		Effect of Different Junctions on Dynamic Substructuring Results using the Transmission Simulator Procedure #16883   Jacopo Brunetti—Università degli Studi dell'Aquila; Walter D'Ambrogio—Università degli Studi dell'Aquila; Annalisa Fregolent—Università degli Studi di Roma La Sapienza	Stochastic Model Correction for the Adaptive Vibration Isolation Round-Robin Challenge #16881   Raleigh J. Bandy—University of Colorado Boulder; Teresa N. Portone—Sandia National Laboratories; Rebecca E. Morrison—University of Colorado	Advancements in the Data Acquisition Field with Multi Measurement Strategies #16736   Kalyan Vitta—Data Physics Corp.
9:30-11:00 a.m.		Meeting of the Applications, Education, Research Committees—Salon 7		
9:40 a.m.		A Preliminary Quantification of Uncertainties in Dynamic Substructuring and the Frame-Wing Problem #16998   Teresa N. Portone—Sandia National Laboratories; Daniel R. Roettgen—Sandia National Laboratories; Kyle D. Neal—Sandia National Laboratories; Bert J. Debuschere—Sandia National Laboratories	Analyzing the Influential Factors on ICaF Performance in Bayesian Model Calibration and Forecasting #16925   Xinyue Xu—The Pennsylvania State University; Yishuang Wang—The Pennsylvania State University; Roland Platz—Deggendorf Institute of Technology; Sez Atamturktur—Clemson University	Enhancing Experimental Modal Analysis Workflow: Supporting Occasional and Expert Users #16700   Denis Beljan—Head Acoustics GmbH; Tim Kamper—Head Acoustics GmbH; Matthias Wegerhoff—Head acoustics GmbH; Haiko Bruecher—Head acoustics GmbH
10:00 a.m.		Comparing Frequency-based and Modal-based Substructuring on the Dynamic Substructuring Round Robin Benchmark #16780   Francesco Trainotti—Technical University of Munich; Ji Qi—Technical University of Munich; Daniel J. Rixen—Technical University of Munich	Bayesian Decision-theoretic Model Selection for Monitored Systems #17047   Antonios Kaniotis—ETH Zürich; Eleni Chatzi—ETH Zürich	Sensing Technology and Electrical Interface Selection for Areas with High EMI/RFI Intensity #17266   Kevin Westhara—Dytran Instruments; Denis Varak—Dytran Instruments; Brian Johnson—Dytran Instruments
10:20 a.m.		Hybrid Modelling of the Round-Robin Test bed using Virtual Points, EMA, SEMM and PRANK #17128   Maarten V. van der Seijs—VIBES.technology; Steven WB Klaassen—VIBES.technology	Model Class and Parameter Selection for Bayesian Filtering with Application to a Modular Active Spring-Damper System: Round-Robin Challenge #17098   Aleem Ullah—University of Nebraska—Lincoln; Milad Roohi—University of Nebraska—Lincoln	Flexible And Cost-Effective Measurements With Python, MATLAB, GNU Octave, And ChatGPT-Powered Coding Using USB Digital Sensors #17484   Michael L. Mains—The Modal Shop, Inc.; Marco A. Peres—The Modal Shop, Inc.; Chad G. Kallmeyer—The Modal Shop, Inc.
10:40 a.m.	EXPOSITION OPEN			Feasibility of using GPS to synchronize Data Acquisition Systems (DAQ) for Acoustic and Vibration measurements. #18074   Robert Eaton—MECALC Technologies
11:00-11:30 a.m.		Coffee Break—Exposition		
11:30-12:30 p.m.		SAGE Publishing Young Engineer Lecture: Daniel Rohe—Sandia National Laboratories—Ballroom CD		
12:30-2:00 p.m.		TD Meetings—All Attendees Welcome! (see page 19 for details)		

Full detailed event schedule available on the Whova app.

SALON 11	SALON 12	SALON 13	SALON 14
AEROSPACE	DYNAMICS OF CIVIL STRUCTURES	MODAL ANALYSIS & STRUCTURAL DYNAMICS	NONLINEAR STRUCTURES & SYSTEMS
25. AEROSPACE II	26. DYNAMICS OF BRIDGES AND RAIL	27. TESTING TECHNIQUES	28. DATA-DRIVEN METHODS
William Semke—University of North Dakota; James Akers—NASA Glenn Research Center	Bjorn Svendsen—NTNU; Anika Sarkar—University of Tennessee	Jon Furlich—ATA Engineering; Kaitlin Spak—Exponent	Alex Elliott—Cranfield University; Andrea Cammarano—University of Glasgow
Green Run Modal Test of the NASA Space Launch System Core Stage #16863   Eric C. Stasiunas—NASA Marshall Space Flight Center; Russel A. Parks—NASA Marshall Space Flight Center; Brendan D. Sontag—NASA Marshall Space Flight Center; Dana E. Chandler—NASA Marshall Space Flight Center	Vibration Testing of an All-Steel Modular Floor Assembly #16859   Onur Avci—West Virginia University; Sahabeddin Rifai—West Virginia University; Feras Abla—West Virginia University; Benjamin Opie—West Virginia University; Matthew Eatherton—Virginia Polytechnic Institute and State University; Benjamin Schafer—Johns Hopkins University; W. Samuel Easterling—Iowa State University; Jerome Hajjar—Northeastern University; Joshua Mouras—Magnusson Klemencic Associates; Ron Klemencic—Magnusson Klemencic Associates	Nonlinear Dynamics Introduced by Modal Shakers #16528   Dana D. Figueroa—Sandia National Laboratories; Benjamin R. Pacini—Sandia National Laboratories	A Tutorial on Data-Driven Methods in Nonlinear Dynamics #17003   Keith Worden—University of Sheffield; Elizabeth J. Cross—University of Sheffield
Dynamic Topology Optimization of Rigid-Flex PCB Robotic Systems #16652   Ryan Semler—Clemson University; Daniel Carlson—Clemson University; John Crowder—Clemson University; Laura Redmond—Clemson University	Showcasing a Framework for Modal Analysis, Mode Tracking, and Novelty Detection on a Suspension Bridge #16819   Anno C. Dederichs—Norwegian University of Science and Technology NTNU; Gabriel A. Del Pozo—Norwegian University of Science and Technology NTNU; Ole Øiseth—Norwegian University of Science and Technology NTNU	Novel Technique for Reducing Shaker-Structure Interactions In Modal Analysis #16697   Steven Vreys—KU Leuven; Jean-Philippe Noël—KU Leuven	
Meeting of the Applications, Education, Research Committees—Salon 7			
X-57 Cruise Motor GVT using Fixed-Base Correction Technique #16676   Keerti K. Bhamidipati—NASA Armstrong Flight Research Center; Natalie D. Spivey—NASA Armstrong Flight Research Center; Scott L. Stebbins—NASA Armstrong Flight Research Center; Samson S. Truong—NASA Armstrong Flight Research Center; Benjamin C. Park—NASA Armstrong Flight Research Center	Dynamics of End-Diaphragm Systems for Prestressed Concrete Bridges in Seismic Regions #17108   Esteban Villalobos Vega—University of Oklahoma; Philip S. Harvey, Jr.—University of Oklahoma; Royce W. Floyd—University of Oklahoma	Modal Testing of Large Wind Turbine Blades #16720   Emilio Di Lorenzo—Siemens Industry Software; Davide Mastrodicasa—Siemens Industry Software; Esben Orlovitz—Siemens Gamesa Renewable Energy; Bart Peeters—Siemens Industry Software	
Control of Liquid Fuel Sloshing using Low Order Mechanical Modeling #16473   Jiwoong Kim—Sunchon National University; Morgan Choi—University of Science and Technology; Huinam Rhee—Sunchon National University	Development of TVF-ARX Model for Separation of Crack Opening Dependent Stiffness Reduction and Vehicle Bridge Interaction Effect #17060   Naohiro Ida—Osaka University; Kodai Matsuoka—Railway Technical Research Institute; Kiyoyuki Kaito—Osaka University	Method Development for Experimental Characterization of Dynamic Strength of Aluminum Structures #17061   Natalie Schaal—California State University, Northridge (CSUN); Peter L. Bishay—California State University, Northridge (CSUN); Erik Serrano—California State University, Northridge (CSUN); J. Brent Knight—NASA Marshall Space Flight Center	Data-Driven Model Reduction of Jointed Assemblies using Spectral Submanifolds #16708   Ahmed Morsy—ETH Zürich; Zhenwei Xu—ETH Zürich; Paolo Tiso—ETH Zürich; George Haller—ETH Zürich
Analysis for Equipment Offset Center of Gravity Relative to Vibration Isolation Plane using Energy Methods #16844   Joseph W. Shaffer—Quartus Engineering Incorporated	Parametric Resonance of a Five Kilometres Long End-supported Pontoon Bridge #16778   Knut Andreas Kvåle—Norwegian University of Science and Technology, NTNU; Aksel Fenerci—Norwegian University of Science and Technology, NTNU; Ole Øiseth—Norwegian University of Science and Technology, NTNU	Comparison of FRF Estimates Obtained Using Various SIMO and MIMO Pneumatic Excitation Configurations #17066   Akhil Sharma—University of Cincinnati; Pranjal Vinze—University of Cincinnati; Randall J. Allemang—University of Cincinnati; Allyn W. Phillips—University of Cincinnati; Aimee Frame—University of Cincinnati	Modeling Nonlinear Beam Vibrations - A Comparison Between Classical and Data-Driven Approaches #16764   Sebastian Tatzko—Leibniz University Hannover; Thomas Breunung—University of Maryland; Hannes Wöhler—Leibniz University Hannover; Alwin Förster—Leibniz University Hannover; Gleb Kleyman—Leibniz University Hannover
Frequency Domain Analysis of Aeroelastic Flutter Problem of Planar Structures Using Generalized Differential Quadrature Method #16871   Doğuhan N. Kılıçarslan—Middle East Technical University; Gunes Kosterit—Middle East Technical University; Ender Cigeroglu—Middle East Technical University		Design and Analysis of Resonant Bar Fixtures for Multi-Axis Shock Response Testing #16563   Adam Bouma—Sandia National Laboratories; Tyler Schoenherr—Sandia National Laboratories; David Soine—Sandia National Laboratories	Effect of Loss Functions on the Learning Capabilities of Physics-Informed Neural Networks in Mechanical Systems #17025   Cristiano Martinelli—University of Strathclyde; Alexander Elliott—Cranfield University; Andrea Cammarano—University of Glasgow
Coffee Break—Ballroom Foyer			
SAGE Publishing Young Engineer Lecture: Daniel Rohe—Sandia National Laboratories—Ballroom CD			
TD Meetings—All Attendees Welcome! (see page 19 for details)			

Full detailed event schedule available on the Whova app.

# TECHNICAL PROGRAM **TUESDAY (AFTERNOON) | JANUARY 30, 2024**

		SALON 8	SALON 9	SALON 10
		DYNAMIC SUBSTRUCTURES	MODEL VALIDATION & UNCERTAINTY QUANTIFICATION	HIGHLIGHTS
CHAIR(S)	SESSION TRACK	29. TRANSFER PATH ANALYSIS AND FORCE ESTIMATION Maarten van der Seijs—VIBES technology; Steven Carter—Sandia National Laboratories	30. RECURSIVE BAYESIAN SYSTEM IDENTIFICATION Yashar Eftekhari Azam—University of New Hampshire; Eleni Chatzi—ETH Zurich	31. TECHNOLOGY APPLICATIONS II Matthew Stefanski—U.S. Air Force Research Laboratory; Chad Walber—Michigan Technological University
2:00 p.m.	EXPOSITION OPEN	A Characterization of the Uncertainty in Force-Control Testing for Aerospace Applications #16985   Katie E. Hart—Rice University; Edwina P. Lewis—Clemson University; Shanell J. Sinclair—Montana State University; Garrison S. Flynn—Los Alamos National Laboratory; Keegan J. Moore—University of Nebraska—Lincoln; Colin M. Haynes—Los Alamos National Laboratory	Physics-informed Information Field Theory Approach to Dynamical System Parameter and State Estimation in Path Space #17028   Kairui Hao—Purdue University; Ilias Billionis—Purdue University	ARTEMIS Modal — It is Not Just Operational Modal Analysis Anymore #17186   Palle Andersen—Structural Vibration Solutions A/S
2:20 p.m.		Thoughts on Using Sparse Inverse Solutions in Transfer Path Analysis #16447   Steven Carter—Sandia National Laboratories	Experimental Validation of Alternative Gaussian Process Kernels for Input-State Estimation via Latent Force Models #16839   Silvia Vettori—Siemens Digital Industries Software/ETH Zurich; Emilio Di Lorenzo—Siemens Digital Industries Software; Bart Peeters—Siemens Digital Industries Software; Eleni Chatzi—ETH Zurich	Virtual Modal Testing #17189   Eddy Dascotte—Dynamic Design Solutions (DDS); Hugo Faustino—Dynamic Design Solutions (DDS)
2:40 p.m.		Different displacement reduction spaces for the use in admittance-based TPA methods #16636   Domen Ocepek—University of Ljubljana; Francesco Trainotti—Technical University of Munich; Gregor Cepon—University of Ljubljana; Miha Boltežar—University of Ljubljana; Daniel J. Rixen—Technical University of Munich	Identification of Railway Bridge Modal Properties via Acceleration Data from Traversing Trains #16945   Charikleia Stoura—ETH Zurich; Vasilis Dertimanis—ETH Zurich; Eleni Chatzi—ETH Zurich	Modal Analysis in Minutes: Camera-based Modal Analysis with Motion Amplification #17259   Jeff Hay—RDI Technologies
3:00 p.m.		Exploiting the Capabilities of a Parametric Reduced Order Model for Full-Assembly Design Optimization in a Component-Based TPA Framework #16807   Fabio Bianciardi—Siemens Industry Software NV; Nicolò Salamone—Siemens Industry Software NV/KU Leuven; Daniel De Gregoriis—Siemens Industry Software NV; Sjoerd van Ophem—KU Leuven/ Flanders Make; Patrick Corbeels—Siemens Industry Software NV; Karl Janssens—Siemens Industry Software NV	Non-Linear Extension for an Output-only Bayesian State Estimator for Partially Observed Structural Systems #17088   Martin Masanes Didyk—University of New Hampshire; Mohsen Ebrahimzadeh Hassanabadi—University of Sydney; Yashar Eftekhari Azam—University of New Hampshire	Modal Test Advancements and Implementation #16565   Timothy C. Marinone—ATA Engineering
3:20 p.m.		Inverse Source Estimation Tools in SDynPy, an Open-Source Python Package #16446   Steven Carter—Sandia National Laboratories; Daniel Rohe—Sandia National Laboratories	Implementation of Bayesian Model Updating in Five-Story Building using Different Observations #17121   Oscar D. Hurtado—Universidad del Valle; Albert R. Ortiz—Universidad del Valle; Daniel Gomez—Universidad del Valle; Rodrigo Astroza—Universidad de los Andes	Non-Mass Loaded Excitation Technique #18059   Peter G. Blaschke—NV-Tech-Design GmbH
3:40-4:40 p.m.		Dessert Break—Exposition		

Full detailed event schedule available on the Whova app.

SALON 11	SALON 12	SALON 13	SALON 14
COMPUTER VISION FOR STRUCTURAL DYNAMICS	DYNAMICS OF CIVIL STRUCTURES	MODAL ANALYSIS & STRUCTURAL DYNAMICS	NONLINEAR STRUCTURES & SYSTEMS
32. HIGH-SPEED CAMERA BASED EMA I	33. HUMAN STRUCTURE INTERACTION	34. MODAL PARAMETER ESTIMATION	35. JOINTS - UQ APPROACHES
Janko Slavič—University of Ljubljana; Alessandro Cattaneo—Los Alamos National Laboratory	Hae Young Noh—Stanford University; Fernando Moreu—University of New Mexico	Kevin Napolitano—ATA Engineering; William Fladung—ATA Engineering	Matthew Brake—Rice University
Computationally Efficient Camera-Based EMA with High SNR and High Frequency Range #16870   Yonggang Wang—Flanders Make@KU Leuven; Thijs Willens—Flanders Make@KU Leuven; Frank Naets—Flanders Make@KU Leuven; Matteo Kirchner—Flanders Make@KU Leuven	Graphical Modeling of the Lower-Limb Joint Motion from the Dynamic Floor Responses under Footstep Forces #16682   Yiwen Dong—Stanford University; Jingxiao Liu—Stanford University; Sung Eun Kim—Lucile Packard Children's Hospital; Kornél Schadt—Lucile Packard Children's Hospital; Jessica Rose—Lucile Packard Children's Hospital; Hae Young Noh—Stanford University	Calculation of Mass-Normalized Modes for Frequency Response Functions Using Acceleration Degrees of Freedom as References #16386   Kevin L. Napolitano—ATA Engineering, Inc.; Peter A. Kernan—ATA Engineering	The Impact of Non-unique Residual Traction on the Nonlinear Dynamics of Jointed Structures: Probabilistic Perspectives #16556   Nidish N. Balaji—University of Stuttgart; Erhan Ferhatoglu—University of Stuttgart
High-frequency Response DIC Measurements with Low-Speed Cameras and Periodic Sine Sweep #16701   Daniele Botto—Politecnico di Torino; Serena Occhipinti—Politecnico di Torino; Christian M. Firrone—Politecnico di Torino; Alessandro Bruno—Politecnico di Torino; Paolo Neri—University of Pisa	Influence of the Ground Reaction Force Prediction on the Human Structure Interaction Phenomenon: An Application of a Bipedal Model #16854   Rafaela L. Silva—Federal University of Paraíba; Roberto L. Pimentel—Federal University of Paraíba; Aleksandar Pavić—University of Exeter; Paweł Hawryszków—Wrocław University of Science and Technology	Efficient Local Reduced Order Model for Thermoelastic Structural Vibrations #16725   Alexander Saccani—ETH Zürich; Paolo Tiso—ETH Zürich	Effects of Non-unique Residual Traction on the Non-repeatability of the Dynamics of Jointed Structures #16576   Arati Bhattu—Rice University; Yi-Chun Lo—National Chung Hsing University; Gianmarco Zara—Politecnico di Torino; Patrick Hippold—University of Stuttgart; Daniel Fochler—University of Stuttgart; Johann Groß—University of Stuttgart; Matthew Brake—Rice University; Malte Krack—University of Stuttgart; Erhan Ferhatoglu—University of Stuttgart
3D Mode-Shape Extraction through Event-Based Light Fields #16604   Andre W. Green—Los Alamos National Laboratory; Moises F. Mello da Silva—Los Alamos National Laboratory; Alessandro Cattaneo—Los Alamos National Laboratory; David L. Mascarenas—Los Alamos National Laboratory	Another Brick in the Wall: The Importance of Partitions in Structural Dynamic Modelling #16932   Michael J. Wesolowsky—Thornton Tomasetti; Muhammad Rahman—Thornton Tomasetti; Brad A. Pridham—Thornton Tomasetti; Rabih Alkhatib—Thornton Tomasetti; Ali Siami—Thornton Tomasetti		Dynamics of Probabilistically-Modelled Jointed Assemblies Considering Manufacturing Tolerances #16835   Ahmed Morsy—ETH Zürich; Paolo Tiso—ETH Zürich
High-Speed Camera Experimental Modal Analysis Based on Pixel Intensities #16554   Ivan Tomac—University of Split; Janko Slavič—University of Ljubljana; Domen Gojrup—University of Ljubljana			Experimental Backbone Curves from Bolted Interfaces with Measured As-Built Surface Topography #16983   Connor G. Davis—Sandia National Laboratories; Benjamin J. Moldenhauer—Sandia National Laboratories; Daniel R. Roettgen—Sandia National Laboratories; Benjamin R. Pacini—Sandia National Laboratories; Robert J. Kuether—Sandia National Laboratories; David A. Najera-Flores—ATA Engineering, Inc.
High-speed IR Camera Based Strain Modal Shapes Identification #16795   Klemen Zaletelj—University of Ljubljana; Janko Slavič—University of Ljubljana; Miha Boltežar—University of Ljubljana			Mathematical Modeling of the Nonlinear Dynamics of Bolted Joint Loosening #16782   Felipe Camargo de Oliveira Kobayashi—University of Nebraska-Lincoln; Aryan Singh—University of Nebraska-Lincoln; Keegan J. Moore—University of Nebraska-Lincoln
Dessert Break—Exposition			

Full detailed event schedule available on the Whova app.

# TECHNICAL PROGRAM TUESDAY (LATE AFTERNOON/EVENING) | JANUARY 30, 2024

CHAIR(S)	SESSION TRACK	SALON 8	SALON 9	SALON 10
		DYNAMIC ENVIRONMENTS TESTING	MODEL VALIDATION & UNCERTAINTY QUANTIFICATION	DYNAMIC SUBSTRUCTURES
		36. ENVIRONMENTS DEFINITION	37. VIRTUAL SENSING & REALTIME MONITORING	38. INTERFACE DYNAMICS
		Pablo Tarazaga—Texas A&M University	Scott Cogan—CNRS	Matthew Allen—Brigham Young University; Marcus Behling—Brigham Young University
4:40 p.m.	EXPO OPEN	Practical Virtual Sensor Deployment for Indirect Torque Estimation in a Range Rover Drivetrain #16467   Luis M. Zapata—KU Leuven; Théo Tuerlinckx—Flanders Make; Yves Perremans—Flanders Make; Frank Naets—KU Leuven	Time-Normalized Unitless Metrics for Quantifying the Value of an SHM System Throughout the Structure's Lifecycle #16609   Mayank Chadha—University of California San Diego; Zhen Hu—University of Michigan—Dearborn; Michael D. Todd—University of California San Diego	Prediction of Mount Dynamics Using Inverse Substructuring and Dimensional Analysis #17084   Jelle Boelens—VIBES Technology; Steven W/B Klaassen—VIBES Technology
5:00 p.m.		Using Modal Projection Error to Optimize Accelerometer Locations for a Modal Filter #16507   Tyler F. Schoenherr—Sandia National Laboratories	Digital Twinning of the Physical System and Integration with Data for Predicting Strain Measurements for Offshore Wind Turbines #16997   Eleonora Maria Tronci—Northeastern University; Babak Moaveni—Tufts University; Anna Haensch—Tufts University; Eric Hines—Tufts University	Investigation of Isolated Branches in Nonlinear Oscillators Using Real-Time Hybrid Testing #16831   A. Mario Puhwein—c; Markus J. Hochrainer—University of Applied Sciences
5:20 p.m.		Test Techniques for Floor Vibration Criteria with a Portable Test Platform #16898   Jon E. Furlich—ATA Engineering Inc.; Tim C. Marinone—ATA Engineering Inc.	Wind Load Estimation of an Operational 6 MW Offshore Wind Turbine: Uncertainty Evaluation of Purely Physics-based vs. Physics Informed Neural Network #17095   Azin Mehrjoo—Tufts University; Eleonora M. Tronci—Tufts University/ Northeastern University; Babak Moaveni—Tufts University; Eric M. Hines—Tufts University	
5:40 p.m.		Comparative Analysis of Dynamic Response Expansion Using SEREP and Pseudo-Force Estimation #16966   Brandon R. Zwink—Sandia National Laboratories; Glen T. Throneberry—Sandia National Laboratories; Ryan A. Schultz—Sandia National Laboratories	An Elephant in the Room: Forecasting Using Validated Physics-based Simulations #17107   Rafael Teloli—Universit�� de Franche-Comt��; Scott Cogan—Universit�� de Franche-Comt��; Fran��ois Hemez—Lawrence Livermore National Laboratory	
6:00 p.m.		Using Modal Analysis and ODS Correction to Identify Mechanical Faults in Rotating Machinery #16425   Mark H. Richardson—Vibrant Technology, Inc.; Brian H. Schawarz—Vibrant Technology, Inc.; Shawn C. Richardson—Vibrant Technology, Inc.; Patrick H. McHargue—Vibrant Technology, Inc.	Uncertainty Quantification for Deep Learning-Based Automatic Crack Detection in the Underwater Environment #16601   Zihan Wu—University of California San Diego; Zhen Hu—University of Michigan Dearborn; Michael Todd—University of California San Diego	
6:20 p.m.			Informing Design of Nuclear Deterrence Systems with Surrogate Model Sobol' Sensitivity Analysis #17050   Shane J. McMurray—Sandia National Labs; Jake Gonzales—Sandia National Labs; Sofie Schunk—Sandia National Labs; Jonathan Smith—Sandia National Labs	
7:30-10:00 p.m.		Women in Dynamics Board Game Night—Ballroom CD		

Full detailed event schedule available on the Whova app.

SALON 11	SALON 12	SALON 13	SALON 14
COMPUTER VISION FOR STRUCTURAL DYNAMICS	DYNAMICS OF CIVIL STRUCTURES	MODAL ANALYSIS & STRUCTURAL DYNAMICS	NONLINEAR STRUCTURES & SYSTEMS
39. HIGH-SPEED CAMERA BASED EMA II	40. STRUCTURAL VIBRATION MITIGATION AND CONTROL	41. VIBRATION REDUCTION	42. JOINTS I
Daniel Rohe—Sandia National Laboratories; Alessandro Sabato—University of Massachusetts Lowell	Scott Harvey—University of Oklahoma; Nicholas Wierschem—University of Tennessee	Michael Mains—The Modal Shop; Brandon Dilworth—MIT Lincoln Laboratory	Christoph Schwingshackl—Imperial College London
Pattern-less Stereophotogrammetry for Structural Dynamic Measurements #16518   Fabio Bottalico—University of Massachusetts Lowell; Alessandro Sabato—University of Massachusetts Lowell	Cable-Based Adaptive Restoring Force Device for Horizontal Seismic Isolation of Acceleration-Sensitive Equipment #16977   Kenneth K. Walsh—Ohio University; Claudia Marin-Artieda—Howard University	Design and Evaluation of Beams with Periodic Material Removal for Vibration Reduction #16743   Vania Gonzales—Universidad de Chile; Viviana Meruane—Universidad de Chile; Olivier Robin—Universidad de Sherbrooke	Hysteretic Manifold-Based Harmonic Balance for Efficient Frequency Domain Calculation of Hysteretic Systems #16550   Rafael Teloli—University of Bourgogne Franche-Comté; Ahmed Morsy—ETH Zurich; Valeria Pinto—Politecnico di Torino; Justin Porter—Rice University; Johann Gross—University of Stuttgart; Malte Krack—University of Stuttgart; Matthew RW Brake—Rice University
A Six-Degree-of-Freedom Camera Motion Correction Method Based on Inertial Measurement Unit and Data Fusion #16586   Tengjiao Jiang—Norwegian University of Science and Technology; Gunnstein T. Frøseth—Norwegian University of Science and Technology; Anders Rønquist—Norwegian University of Science and Technology	Investigation of the Impact of Slider Mass Stiffness on the Behavior of the Variable Inertia Rotational Mechanism for Structural Vibration Mitigation #16866   Anika Sarkar—University of Tennessee; Nicholas Wierschem—University of Tennessee	On the Application of Vibration Absorbers Based on Acoustic Black Holes to the Handlebar of a Low-cost Motorcycle #17117   Jorge I. Valdes-Ceron—Centro de Investigación y de Estudios Avanzados del I.P.N.; Gerardo Silva-Navarro—Centro de Investigación y de Estudios Avanzados del I.P.N.	Tracking Superharmonic and Internal Resonances in Frictional Systems #16396   Justin H. Porter—Rice University; Matthew RW Brake—Rice University
Analyzing Spider-web Structural Dynamics: An Enhanced High-Speed Camera-Based EMA Approach #16644   Thijs CP Masmeijer—University of Washington; Klemen Zaletelj—University of Ljubljana; Janko Slavič—University of Ljubljana; Ed Habtour—University of Washington	Nonlinear Behavior of a Rolling Pendulum Isolation System Subject to 3D Excitations #17032   Esteban Villalobos Vega—University of Oklahoma; Philip S. Harvey—University of Oklahoma; Erika N. Vanderheiden—University of Oklahoma	Non-resonant Targeted Energy Transfer Local with Vibro-Impact Nonlinearity #16928   Joshua R. Tempelman—University of Illinois at Urbana Champaign; Alexander F. Vakakis—University of Illinois at Urbana Champaign; Kathryn H. Matlack—University of Illinois at Urbana Champaign	Tribo-Dynamics Digital Twins (TDDT): Prediction of Friction and Frequency Response Function (FRF) in a Dry Sliding Tribological Contact #16694   Saeid Taghizadeh—The University of Sheffield; Matthew S. Bonney—Swansea University; David Wagg—The University of Sheffield
Smartphone-based Digital Image Correlation for vibrating structures. #16890   Serena Occhipinti—Politecnico di Torino; Tristan Chevreau—Ecole Centrale de Lyon; Paolo Neri—Università di Pisa; Christian M. Firrone—Politecnico di Torino; Daniele Botto—Politecnico di Torino	Semi-active Control of a Banded Rotary Friction Device #17080   Parker Huggins—University of South Carolina; Liang Cao—Lehigh University; Austin Downey—University of South Carolina; James Ricles—Lehigh University; Simon Laflamme—Iowa State University	Experimental Demonstration of Superimposed Orthogonal Two-Dimensional Structure-borne Traveling Waves #17106   William C. Rogers—Texas A&M University; Amirhossein Omid Soroosh—Texas A&M University; Trevor C. Turner—Texas A&M University; Mohammad I. Albakri—Texas A&M University; Pablo A. Tarazaga—Texas A&M University	Validation of Nonlinear Reduced Order Models with As-Built Surface Geometry in Bolted Joints #16646   Robert J. Kuether—Sandia National Laboratories; David A. Najera-Flores—ATA Engineering, Inc.; Benjamin Moldenhauer—Sandia National Laboratories; Benjamin R. Pacini—Sandia National Laboratories; Daniel R. Roettgen—Sandia National Laboratories
Innovative Tools for Experimental Modal Analysis of Brake Discs #16768   Jacob F. Krause—Society for the Advancement of Applied Computer Science; Daniel Herfert—Society for the Advancement of Applied Computer Science; Maik Gollnick—Society for the Advancement of Applied Computer Science; Kai Henning—Society for the Advancement of Applied Computer Science	Structural Vibration Control Performance of Semi-Active Cam-Lever Friction Devices Under Multiple Friction Surfaces #17120   Alejandro Palacio-Betancur—The Pennsylvania State University; Daivik Manickmalar—The Pennsylvania State University; Rayyan RS Alwaneen—The Pennsylvania State University; Mariantonieta Gutierrez Soto—The Pennsylvania State University		Modeling Bolted Joints in the S4 Beam at Various Preloads with Discrete Iwan Elements #16535   Suzanna Gilbert—Brigham Young University; Carson Wynn—Brigham Young University; Cameron Stoker—Brigham Young University; Samuel Clawson—Brigham Young University; Matthew S. Allen—Brigham Young University
			A Non-Parametric Iwan Model Derived from Measurements of Amplitude-dependent Frequency and Damping #16971   Drithi Shetty—Rice University; Samuel Clawson—Brigham Young University; Matthew Allen—Brigham Young University
Women in Dynamics Board Game Night—Ballroom CD			

Full detailed event schedule available on the Whova app.

# TECHNICAL PROGRAM WEDNESDAY (MORNING) | JANUARY 31, 2024

CHAIR(S)	SESSION TRACK	SALON 8	SALON 9	SALON 10
		DYNAMIC ENVIRONMENTS TESTING	MODEL VALIDATION & UNCERTAINTY QUANTIFICATION	SYSTEM IDENTIFICATION
		43. FIXTURE DESIGN I	44. SURROGATE MODELING AND REDUCED ORDER MODELS	45. SYSTEM IDENTIFICATION AND STRUCTURAL HEALTH MONITORING
		Cora Taylor—Michigan Technological University; Tyler Schoenherr—Sandia National Laboratories	Zhen Hu—University of Michigan-Dearborn; Kyle Neal—Sandia National Laboratories	Zhu Mao—Worcester Polytechnic Institute; Robert Coppolino—Measurement Analysis Corporation
9:00-10:30 a.m.		Program Planning Committee Meeting—Salon 7		
9:00 a.m.		Mode Switching and Nonlinear Characteristics of BARC Systems due to Scalability #16670   Ezekiel Granillo—New Mexico State University; Jonah Madrid—New Mexico State University; Christopher L. Padilla—New Mexico State University; Jorge L. Perez—New Mexico State University; Abdessattar Abdelkefi—New Mexico State University	Keynote: Uncertainty Quantification in Machine Learning for Prognostics and Health Management: Challenges and Opportunities #17151   Chao Hu—University of Connecticut	Population-based Mode Shape Identification of Structures via Graph Neural Networks #17043   Xudong Jian—ETH Zurich/Singapore-ETH Centre; Gregory Duthé—ETH Zurich; Eleni Chatzi—ETH Zurich
9:20 a.m.		Evaluation of the Characteristics of BARC Systems under Single and Multi-Axis Excitations #16679   Ezekiel Granillo—New Mexico State University; Seuren Jackson—New Mexico State University; Jonah Madrid—New Mexico State University; Jorge Perez—New Mexico State University; Abdessattar Abdelkefi—New Mexico State University		A Practitioner's Guide to Local FRF Estimation #16939   Keaton Coletti—University of Georgia; Ryan Schultz—Sandia National Laboratories; Steven Carter—Sandia National Laboratories
9:40 a.m.		Dynamics and Nonlinear Characterization of BARC Systems with Varying Central cut Widths #16740   Christopher L. Padilla—New Mexico State University; Antonio Flores—New Mexico State University; Kyle W. Girven—New Mexico State University; Ezekiel Granillo—New Mexico State University; Jonah Madrid—New Mexico State University; Abdessattar Abdelkefi—New Mexico State University	Surrogate Modeling of Dynamic Systems with Material Nonlinearity #16888   Manuel A. Vega—Los Alamos National Laboratory; Joshua W. Dyer—Los Alamos National Laboratory; Joseph ED Hess—Los Alamos National Laboratory; Zhen Hu—University of Michigan-Dearborn	Data-Driven State-Space Identification of the Nonlinear Vibrations of an F-16 Aircraft Structure #16544   Merijn Floren—KU Leuven; Jan Swevers—KU Leuven; Jean-Philippe Noël—KU Leuven
10:00 a.m.	EXPOSITION OPEN	Best Practices for Modeling Bolted Joints: Calibrating the BARC System #17056   Tyler Alvis—Sandia National Laboratories; Tyler Schoenherr—Sandia National Laboratories	Multiscale Corrosion Damage Diagnostics and Prognostics for a Miter Gate #16495   Guofeng Qian—University of California San Diego; Zihan Wu—University of California San Diego; Zhen Hu—University of Michigan Dearborn; Michael Todd—University of California San Diego	Comparison of Data-Driven Methods on Discovering the Dynamics of the Unforced Multi-Axis Cart System #16567   Hunter R. Kramer—Duke University; Sam A. Moore—Duke University; Brian P. Mann—Duke University
10:20 a.m.		A Genetic Algorithm-Based Approach for Designing a Fixture that Preserves the Desired Dynamics of a Connecting Part #16775   Janette J. Meyer—Vanderbilt University; Ray Joshua—Honeywell, Kansas City National Security Campus; Pranav M. Karve—Vanderbilt University; Sankaran Mahadevan—Vanderbilt University; Douglas E. Adams—Vanderbilt University	Dynamic State Estimation via Likelihood-Free Bayesian Inference Based on Conditional Invertible Neural Networks #16571   Jice Zeng—University of Michigan-Dearborn; Michael D. Todd—University of California, San Diego; Zhen Hu—University of Michigan-Dearborn	A PCA/Natural Frequencies Based Approach for Damage Detection: Implementation on a Laboratory Structure Subjected to Environmental Variability #16802   Stefano Pavoni—Università di Parma; Marta Berardengo—Università di Genova; Stefano Manzoni—Politecnico di Milano; Francescantonio Lucà—Politecnico di Milano; Marcello Vandalì—Università di Parma
10:40-11:30 a.m.		Coffee Break—Exposition		

Full detailed event schedule available on the Whova app.

SALON 11		SALON 12		SALON 13		SALON 14	
COMPUTER VISION FOR STRUCTURAL DYNAMICS		ROTATING MACHINERY		MODAL ANALYSIS & STRUCTURAL DYNAMICS		NONLINEAR STRUCTURES & SYSTEMS	
46. IN MEMORY OF DAVID EWINS I		47. ROTATING MACHINERY I		48. DAMAGE DETECTION		49. NONLINEAR MODEL REDUCTION I	
Dario Di Maio—University of Twente; Jip van Tiggelen—University of Twente		Jason Blough—Michigan Technological University; Brian Damiano—Oak Ridge National Laboratory		Sourabh Sangle—Texas A&M University		Paolo Tiso—ETH Zürich	
Program Planning Committee Meeting—Salon 7							
Continuous Scanning LDV: A Raison D'être #16527   Dario Di Maio—University of Twente		History of Digital Order Tracking and Applications #17017   Jason R. Blough—Michigan Technological University		Acoustic Resonance Crack Identification in Thermoelectric Bi2Te3 Wafers #16882   Lindsay Wright—Rice University; Alexandra Murphy—Florida International University; Ruth Hammond—Florida International University; John Greenhall—Los Alamos National Laboratory; Milo Prsbrey—Los Alamos National Laboratory		A Tutorial on Nonlinear Model Order Reduction #17126   Alessandra Vizzaccaro—University of Exeter	
Scanning a Helicopter Engine Casing with a 3D SLDV #16826   Matt de Brett—Imperial College London; Andrew Rix—Rolls-Royce Plc; Vaclav Ondra—Rolls-Royce Plc; Sophoclis Patsias—Rolls-Royce Plc; Christoph Schwingshackl—Imperial College London				Evaluating Damage-sensitive Features for Stiffness Loss Detection in an Aircraft Component using ML Classifiers #17039   Nathan R. Doshi—United States Military Academy; Emmett R. Lepp—United States Military Academy; Christopher J. Sowinski—United States Military Academy; Thomas J. Matarazzo—United States Military Academy; Andrew T. Bellocchio—United States Military Academy; Danny L. Parker—United States Army PEO Aviation			
Panoramic 3D Operating Deflection Shape Measurement of a Cylindrical Structure using a Mirror-Assisted 3D CSLDV System #16721   Ke Yuan—University of Maryland Baltimore County; Weidong Zhu—University of Maryland Baltimore County				Damage Detection in Diffuse and Non-diffuse Acoustic Field #17069   Antonio Culla—University of Rome La Sapienza; Francesco Massi—University of Rome La Sapienza; Silvia Milana—University of Rome La Sapienza; Luigi Severa—University of Rome La Sapienza			
CAE Guided and SLDV Tested FE Model Correlation and Updating for an ICE Radiator Fan #17063   Bhaskar Banerjee—ANSYS Inc.; Osama Jameel—Polytec Inc.; David Damiani—Polytec Inc.; Vikrant Palan—Polytec Inc.		Impact of Periodic Path Imperfections on Dynamic Response of Centrifugal Pendulum Vibration Absorbers #17044   Bahadır Sarikaya—University of Massachusetts Lowell; Murat Inalpolat—University of Massachusetts Lowell		The Effect of Gravity on the Dynamics of Very Slender Structures #16434   Lawrence Virgin—Duke University		Reduced Order Modeling Research Challenge 2023: Nonlinear Dynamic Response Predictions for an Exhaust Cover Plate #16538   Kyusic Park—University of Minnesota; Matthew S. Allen—Brigham Young University; Zhenwei Xu—ETH Zurich; George Haller—ETH Zurich; Alexander Saccani—ETH Zurich; Paolo Tiso—ETH Zurich; Amir K. Bagheri—Imperial College London; Yichang Shen—Imperial College London; Ludovic Renson—Imperial College London; Valentin Sonneville—Technical University of Munich; Alessandra Vizzaccaro—University of Exeter; Loic Salles—University of Liege; Hassan Jalali—Northumbria University; Hamed Farokhi—Northumbria University; Alessio Colombo—Politecnico di Milano; Giorgio Gobat—Politecnico di Milano; Attilio Frangi—Politecnico di Milano; Cyril Touze—Institut Polytechnique de Paris; Max de Bono—University of Bristol; Simon Neild—University of Bristol	
		Rotordynamics Continuum Finite Element Formulations from A Structural and Multibody Dynamics Perspective #16660   Francesco Trainotti—Technical University of Munich; Andreas Zwölfer—Technical University of Munich; Justin Westphal—Technical University of Munich; Daniel J. Rixen—Technical University of Munich				Review of Craig-Bampton Internal Mode Selection Techniques for Nonlinear Multibody Analyses #16417   Océane Topenot—University of Franche-Comté; Gaël Chevallier—University of Franche-Comté; Christophe Eulerich—SAFRAN Aircraft Engines; Scott Cogan—University of Franche-Comté	
Coffee Break—Exposition							

Full detailed event schedule available on the Whova app.

# TECHNICAL PROGRAM WEDNESDAY (LATE-MORNING/AFTERNOON) | JANUARY 31, 2024

CHAIR(S)	SESSION TRACK	SALON 8	SALON 9	SALON 10
		DYNAMIC ENVIRONMENTS TESTING	DATA SCIENCE IN ENGINEERING	FINITE ELEMENT TECHNIQUES
		50. FIXTURE DESIGN II	51. APPLICATIONS OF MACHINE LEARNING	52. FINITE ELEMENT TECHNIQUES
		Troy Skousen—Sandia National Laboratories; Alexandra Karlicek—MIT Lincoln Laboratory	Thomas Matarazzo—United States Military Academy; Francois Hemez—Lawrence Livermore National Laboratory	Jacquelyn Moore—Sandia National Laboratories; Aimee Frame—University of Cincinnati
11:30 a.m.	EXPOSITION OPEN	Investigation of Blending Impedance and Modal Fixture Neutralization Methods #16930   Troy J. Skousen—Sandia National Laboratories; John M. Matthews—University of Massachusetts Lowell/Sandia National Laboratories; Peter Avitabile—University of Massachusetts Lowell	Statistical Evaluation of Machine Learning for Vibration Data #16972   Samuel Myren—Virginia Tech/Los Alamos National Laboratory; Garrison Flynn—Los Alamos National Laboratory; Nidhi Parikh—Los Alamos National Laboratory; Emily Casleton—Los Alamos National Laboratory; Dave Higdon—Virginia Tech	Efficient Frequency-based Modelling of Rotating Tire Dynamics for NVH Applications #16805   Domenico Minervini—Siemens Digital Industries Software; Marc Brughmans—Siemens Digital Industries Software; Claudio Myrta—Università degli Studi di Firenze; Theo Geluk—Siemens Digital Industries Software
11:50 a.m.		Determining the Required Input Force Set for Fixture Neutralization #16868   John M. Matthews—University of Massachusetts Lowell/Sandia National Laboratories; Troy J. Skousen—Sandia National Laboratories; Peter Avitabile—University of Massachusetts Lowell	Utilization of Bridge Acceleration Response for Indirect Strain Sensing #16732   Soheila Sadeghi Eshkevari—Lehigh University; Debarshi Sen—Southern Illinois University; Soheil Sadeghi Eshkevari—Massachusetts Institute of Technology; Iman Dabbaghchian—Lehigh University; Giulia Marasco—Lehigh University; Shamim Pakzad—Lehigh University	FEA on Silencers Structural Failure Analysis #16891   Paul Liang—Durr Universal, Inc.
12:10 p.m.		Using a Scanning Laser Doppler Vibrometer to Characterize the Full-Field Response of a Dynamic Environment Test Fixture #16608   Cora J. Taylor—Michigan Technological University; Jason R. Blough—Michigan Technological University; James P. DeClerck—Michigan Technological University; Chuck D. VanKarsen—Michigan Technological University; Raymond Joshua—Honeywell, Kansas City National Security Campus	Learning Missing Data in Measurements using Meta Modeling Techniques #16919   Javier E. Arroyo—University of Nebraska-Lincoln; Thomas Ramsey—University of Nebraska-Lincoln; Cristian Lopez—University of Nebraska-Lincoln; Keegan J. Moore—University of Nebraska-Lincoln	Propagation of Geometric Uncertainties Through the Analytic Derivative of the System Matrices #17040   Abdelhakim Bouras—University of Genova; Luigi Carassale—Università di Genova
12:30 p.m.		Dynamic Topology Optimization used to Modify Mode Shapes #16623   Charles D. Van Karsen—Michigan Technological University; Cora J. Taylor—Michigan Technological University; Jason R. Blough—Michigan Technological University; James P. DeClerck—Michigan Technological University; Raymond Joshua—Honeywell, Kansas City National Security Campus	On the use of Symbolic Regression for Population-Based Modelling of Structures #16828   George Isaiamanis—University of Sheffield; Nikolaos Dervilis—University of Sheffield; Keith Worden—University of Sheffield	Time Domain Finite Element Analysis of Viscoelastic Damped Structures Using Fractional Derivative Constitutive Model #17085   Jean-François Deü—Conservatoire National des Arts et Métiers; Lucie Rouleau—Conservatoire National des Arts et Métiers
12:50 p.m.		PDADyE Applied to a 2-attachment Fixture Case #16612   Cora Taylor—Michigan Technological University; Jason R. Blough—Michigan Technological University; James P. DeClerck—Michigan Technological University; Chuck D. VanKarsen—Michigan Technological University; Raymond Joshua—Honeywell, Kansas City National Security Campus		
1:10-2:40 p.m.		IMAC Awards Luncheon—Ballroom CD		

Full detailed event schedule available on the Whova app.

SALON 11	SALON 12	SALON 13	SALON 14
COMPUTER VISION FOR STRUCTURAL DYNAMICS	ROTATING MACHINERY	MODAL ANALYSIS & STRUCTURAL DYNAMICS	NONLINEAR STRUCTURES & SYSTEMS
53. OPTICAL SYSTEMS FOR ROTATING STRUCTURES	54. ROTATING MACHINERY II	55. DAMPING	56. NONLINEAR MODEL REDUCTION II
Javad Baqersad—Kettering University; Jayant Sirohi—University of Texas at Austin	Brian Damiano—Oak Ridge National Laboratory; Jason Blough—Michigan Technological University	Jon Furlich—ATA Engineering; Luke Jurmu—Caterpillar Inc.	Alessandra Vizzaccaro—University of Bristol
Tutorial: Optical and Vision-Based Systems to Measure the Dynamics of Rotating Structures #16715   Javad Baqersad—Kettering University; Jayant Sirohi—The University of Texas at Austin	Using a Cell Phone Video and ODS Correlation to Diagnose Unbalance in Rotating Machinery #16426   Mark H. Richardson—Vibrant Technology, Inc.; Brian H. Schwarz—Vibrant Technology, Inc.; Shawn H. Richardson—Vibrant Technology, Inc.	On the Estimation of Modes with High Difference in Frequency-Damping Ratio for Time Domain Methods in OMA #16702   Esben Orlowitz—Siemens Gamesa	Incorporating Implicit Condensation into Data-Driven Reduced-Order Models for Nonlinear Structures #16737   Alex J. Elliott—Cranfield University
	Dynamic Behavior of Turbopump Inducer Submerged in Liquid #16847   Yunus E. Ozelik—Roketsan Inc.; Yunus Tufek—Roketsan Inc.	Effects of Viscoelastic Damping Treatments on Structural Members #16710   Samuel P. Tilmann—Air Force Research Laboratory	Explanation for Oscillating Backbone Curves based on Fractional Spectral Submanifolds #16711   Leonardo Bettini—ETH Zurich; Bálint Kaszás—ETH Zurich; Mattia Cenedese—ETH Zurich; Tobias Brack—ETH Zurich; Jürg Dual—ETH Zurich; George Haller—ETH Zurich
	Numerical and Experimental Investigations of an on-board Rotor Subject to Multiaxial Excitations #17021   Eric Chatelet—INSA Lyon; Yvon BRIEND—ArianeGroup SAS; Regis Dufour—INSA Lyon; Marie-Ange Andrianoely—INSA Lyon; Antoine Naulleau—Avnir Engineering	Improvement of Bandgap Properties in Finite Metamaterial Beam Structures by Local Damping Measures #16816   Hannes Wöhler—Leibniz University Hannover; Sebastian Tatzko—Leibniz University Hannover	Physics-Informed Model Order Reduction via Generalized Characteristic Value Decomposition #17111   Dalton Stein—University of Rhode Island; David Chelidze—University of Rhode Island
Full-field Modal Parameter Estimation of a Rotating Structure using an Image-based Tracking Continuously Scanning Laser Doppler Vibrometer System #16540   Linfeng Lyu—University of Maryland, Baltimore County; Garrett D. Higgins—University of Maryland, Baltimore County; Weidong Zhu—University of Maryland, Baltimore County		Experimental Modal Analysis of Gears with Particle Damping #17074   Mirco Jonkeren—Leibniz University Hannover; Tobias Ehlers—Leibniz University Hannover	Delay-embedded Modal Analysis for Spectral Submanifold Identification #16456   Joar Axås—ETH Zurich; George Haller—ETH Zurich
Digital Coded Exposure for Physically-Motivated, Event-Based Frame Formation, Interpolation and Motion Blur Control #16734   Andre W. Green—Los Alamos National Laboratory; Moises F. Mello da Silva—Los Alamos National Laboratory; Alessandro Cattaneo—Los Alamos National Laboratory; David L. Mascareñas—Los Alamos National Laboratory			
IMAC Awards Luncheon—Ballroom CD			

Full detailed event schedule available on the Whova app.

# TECHNICAL PROGRAM WEDNESDAY (AFTERNOON) | JANUARY 31, 2024

CHAIR(S)	SESSION TRACK	SALON 8	SALON 9	SALON 10
		DYNAMIC ENVIRONMENTS TESTING	DATA SCIENCE IN ENGINEERING	SYSTEM IDENTIFICATION
		57. MIMO DET I	58. MACHINE LEARNING AND MODELING OF STRUCTURES	59. SYSTEM IDENTIFICATION
		John Schultze—Los Alamos National Laboratory; Tyler Schoenherr—Sandia National Laboratories	Zhu Mao—Worcester Polytechnic Institute; Amir Gandomi—University of Technology Sydney	Eric Little—St. Cloud State University; Cora Taylor—Michigan Technological University
2:40 p.m.	EXPOSITION OPEN	Improving IMMAT Planning Through Shaker Modeling and Modal Filtering #16430   Marcus Behling—Brigham Young University; Bradon Thomason—Brigham Young University; Matt Allen—Brigham Young University; Randall Mayes—Mayes Consulting; Washington DeLima—Kansas City National Security Campus; Jonathan Hower—Kansas City National Security Campus	Quantifying the Value of Information Transfer in Population-based SHM #17020   Aidan J. Hughes—University of Sheffield; Jack Poole—University of Sheffield; Nikolaos Dervilis—University of Sheffield; Paul Gardner—Frazer-Nash Consultancy; Keith Worden—University of Sheffield	A New Impact Localization Method Based on Spatially Sparse FRFs: Evaluation using a FE Beam Model #16552   Sa'ed Alajlouni—The Hashemite University; Vijaya VN Sriram Malladi—Michigan Technological University; Pablo Tarazaga—Texas A&M University
3:00 p.m.		Evaluating Degree of Freedom Selection Methods for MIMO Vibration Modeling #16599   Moheimin Khan—Sandia National Laboratories; Tyler Schoenherr—Sandia National Laboratories	Transfer Learning Across Heterogeneous Structures Through Adversarial Training #16787   Mohammad Hesam Soleimani—Babakamali—University of California, Los Angeles; Onur Avci—West Virginia University; Serkan Kiranyaz—Qatar University; Ertugrul Taciroglu—University of California, Los Angeles	Mitigating Machine-Structure Interaction Issues through Dynamic Properties Assessment and Structural Modifications in a Coal Preparation Plant #16786   Alejandro Duarte—Mincka Engineering; Fidel Gonzalez—Mincka Engineering
3:20 p.m.		Utilizing Under-determined Solutions for MIMO Vibration Control #16625   Ryan Schultz—Sandia National Laboratories	Integrating Digital Twins and Reduced Order Modeling for Enhanced Structural Health Monitoring and Material Characterization of Turbin Blade #17116   Seyed Jamaeddin Mostafavi Yazdi—Kettering University; Praveenkumar Muthiah Ramakrishnan—Kettering University	Parameter Optimization and Comparison of Different Small Scale Elasticity Theories for Carbon Nanotubes #16869   Doğuhan N. Kılıçarslan—Middle East Technical University; Ender Cigeroglu—Middle East Technical University
3:40 p.m.		Development of a Digital Twin for a Multi-Axis Vibration Testing Setup #16884   Rúben M. Araújo—Siemens Digital Industries Software; Raul F. Flores Hernandez—Siemens Digital Industries Software/Politecnico di Torino; Alberto Garcia de Miguel—Siemens Digital Industries Software; Mattia Dal Borgo—Siemens Digital Industries Software; Bart Forrier—Siemens Digital Industries Software; Umberto Musella—Siemens Digital Industries Software; Emilio Di Lorenzo—Siemens Digital Industries Software; Alfonso Pagani—Politecnico di Torino; Frank Naets—KU Leuven	Markov Chain Monte Carlo on Matrix Manifolds for Probabilistic Model Order Reduction #17127   Alessandra Vizzaccaro—University of Exeter; Mikkel B. Lykkegaard—digiLab; Tim Dodwell—University of Exeter	Residual-based Identification of the Input Forces using Gaussian Process Discrepancy Model #17094   Antonina Kosikova—Columbia University; Andrew Smyth—Columbia University
4:00 p.m.		Quantitative Comparison of Vibration Testing Techniques #16917   Tharwat Elkabani—New Mexico State University; Celvi Lisy—Massachusetts Institute of Technology; Gerrit Vander Wiel—LeTourneau University; Peter Fickenwirth—Los Alamos National Laboratory; Thomas Thompson—Los Alamos National Laboratory; Sandra Zimmerman—Los Alamos National Laboratory		
4:20-5:00 p.m.		Coffee Break—Exposition		

Full detailed event schedule available on the Whova app.

SALON 11	SALON 12	SALON 13	SALON 14
COMPUTER VISION FOR STRUCTURAL DYNAMICS	BIOMEDICAL APPLICATIONS	BASICS OF MODAL ANALYSIS	NONLINEAR STRUCTURES & SYSTEMS
60. DIC APPLICATIONS	61. BIOMEDICAL APPLICATIONS	62. BASICS OF MODAL ANALYSIS: TUTORIALS I	63. NONLINEAR MODEL REDUCTION III
Marc Eitner— <i>The University of Texas at Austin</i> ; Bluejay Robinson— <i>Correlated Solutions, Inc.</i>	Sheyda Davaria— <i>Northrop Grumman</i>	Michael Mains— <i>The Modal Shop</i>	Matthew Allen— <i>Brigham Young University</i> ; Drithi Shetty— <i>Rice University</i>
Full Field Stereo DIC and Sensor merging for an FE Model Validation #16850   Davide Mastrodicasa— <i>Siemens Industry Software NV</i> ; Emilio Di Lorenzo— <i>Siemens Industry Software NV</i> ; Bart Peeters— <i>Siemens Industry Software NV</i> ; Patrick Guillaume— <i>Vrije Universiteit Brussel</i>	Modal Gait Analysis: On the use of POD and MAC to Extract the Fundamental Differences between a Human and a Robot Walking #16561   Arian Kist— <i>Technical University of Munich</i> ; Daniel Rixen— <i>Technical University of Munich</i>	Understanding the Fourier Transform #17208   John Hiatt— <i>Dewesoft</i>	Dynamic Response of a Structure with Frictional and Geometric Nonlinearity using Reduced Order Model #16588   Arati A. Bhattu— <i>Rice University</i> ; Matthew RW Brake— <i>Rice University</i>
Deformation Estimation of a Clamped Plate using a PVDF Sensor Array #16921   Marc A. Eitner— <i>The University of Texas at Austin</i> ; Jayanti Sirohi— <i>The University of Texas at Austin</i>	3D Printable Analogue Spine Models: Towards Cost and Time Effective Spinal Biomechanical Research #16531   Siril Teja Dukkupati— <i>McGill University</i> ; Mark Driscoll— <i>McGill University</i>		Evaluation of Interface Reduction Techniques for Systems with Frictional Contacts within the Scope of the Harmonic Balance Method #16722   Tido Kubatschek— <i>Leibniz University Hannover</i> ; Alwin Förster— <i>Leibniz University Hannover</i>
Super-sensitivity Full-field Displacement Measurement with Photogrammetry #16994   Shanwu Li— <i>Michigan Technological University</i> ; Yongchao Yang— <i>Michigan Technological University</i>	Effect of Ligaments on Lumbar Spine Stiffness: A Systematic Investigation using Novel 3D-Printed Analogue Spine Models #16532   Siril Teja Dukkupati— <i>McGill University</i> ; Mark Driscoll— <i>McGill University</i>		Nonlinear Vibration Analysis of a Two-Blade System with Shroud-To-Shroud Contact by using Response Dependent Nonlinear Normal Modes #16909   Tahsin Ahi— <i>The Ohio State University</i> ; Ender Cigeroglu— <i>Middle East Technical University</i> ; H. Nevzat Özgüven— <i>Middle East Technical University</i>
Investigation of Internal Illumination as an Optical Method for Digital Image Correlation #17045   Vasha Sedlacek— <i>The University of Texas at Austin</i> ; Marc Eitner— <i>The University of Texas at Austin</i>	Finite Element Evaluation of the Contribution of Intra-Abdominal Pressure Toward Dynamic Spine Stability #16955   Sean A. Murray— <i>McGill University</i> ; Mark Driscoll— <i>McGill University</i>	Understanding How Filters Affect Data #17209   John Hiatt— <i>Dewesoft</i>	Nonlinear Model Reduction from Experimental Data to Fractional Spectral Submanifolds #16990   George Haller— <i>ETH Zurich</i>
An Abundance of Spatial Points: Implications for Camera-Based Modal Analysis and Beyond #16862   Sean Collier— <i>The Pennsylvania State University</i> ; Tyler Dare— <i>The Pennsylvania State University</i>	Dynamic Analysis of a Tactile Device for Mimicking Mechanical Stimuli Responsible of Texture Perception #17000   Livia Felicetti— <i>Sapienza University of Rome</i> ; Eric Chatelet— <i>Univ Lyon</i> ; Francesco Massi— <i>Sapienza University of Rome</i>		
Coffee Break—Exposition			

Full detailed event schedule available on the Whova app.

# TECHNICAL PROGRAM WEDNESDAY (EVENING) | JANUARY 31, 2024

	SALON 8	SALON 9	SALON 10
TRACK	DYNAMIC ENVIRONMENTS TESTING	DATA SCIENCE IN ENGINEERING	
SESSION	64. MIMO DET II	65. STRUCTURAL MODELLING AND CONDITION ASSESSMENT	
CHAIR(S)	Umberto Musella—Siemens Industry Software; Ryan Schultz—Sandia National Laboratories	Austin Downey—University of South Carolina; Nikolaos Dervilis—University of Sheffield	
5:00 p.m.	CRI-based IMMAT on a Simplified Commercial Airplane Model #17110   Amirhossein Omid Soroor—Texas A&M University; Lucas Spies—Texas A&M University; Pablo A. Tarazaga—Texas A&M University	A Multi-Factor Decision Framework for Offshore Wind Turbine Maintenance #17057   Anna R. Haensch—Tufts University; Eleonora M. Tronci—Northeastern University; Babak Moaveni—Tufts University; Eric Hines—Tufts University	
5:20 p.m.	Quantifying Differences Between MIMO and SISO Testing on the BARC Structure #16568   Hunter R. Kramer—Duke University; John F. Schultze—Los Alamos National Laboratory; Shannon M. Danforth—Los Alamos National Laboratory; Brian P. Mann—Duke University	Optimal Modeling of Deep Groove Ball Bearings for Application in Multibody Dynamics Simulations #16693   Josef Koutsoupakis—Aristotle University of Thessaloniki; Dimitrios Giagopoulos—Aristotle University of Thessaloniki	
5:40 p.m.	On the Fatigue Damage Estimation in Multi-axis and Single-axis Vibration Testing #16463   Enrico Proner—University of Ferrara; Emiliano Mucchi—University of Ferrara	Frequency-Based Damage Detection using Drone-deployable Sensor Package with Edge Computing #17035   Ryan Yount—University of South Carolina; Joud Satme—University of South Carolina; Austin RJ Downey—University of South Carolina	
6:00 p.m.	Fatigue Analysis of Solder Joints using Time Domain Reflectometry #16673   Lauren Tomanek—The University of Texas at Austin/Sandia National Laboratories; Thomas Brown—Sandia National Laboratories; Thomas Buchheit—Sandia National Laboratories; Kenny Leeson—Sandia National Laboratories		
7:00-10:00 p.m.	IMAC Social Event: Howl At The Moon—(see page 23 for details)		

Full detailed event schedule available on the Whova app.

SALON 11	SALON 12	SALON 13	SALON 14
COMPUTER VISION FOR STRUCTURAL DYNAMICS	NONLINEAR STRUCTURES & SYSTEMS	BASICS OF MODAL ANALYSIS	NONLINEAR STRUCTURES & SYSTEMS
67. OPTICAL SYSTEM FOR ADDITIVE MANUFACTURING AND DAMAGE DETECTION	68. JOINTS II	69. BASICS OF MODAL ANALYSIS: TUTORIALS II	70. CONTROL OF NONLINEAR SYSTEMS
Pawel Malinowski—Polish Academy of Sciences; David Mascarenas—Los Alamos National Laboratory	Matthew Brake—Rice University	Michael Mains—The Modal Shop	Ludovic Renson—Imperial College London
Employing Guided Wave-Based Damage Localisation Techniques for Additively Manufactured Plates with Different Infill Densities #16637   Pawel H. Malinowski—Polish Academy of Sciences; Mohammad Ali Fakihi—Polish Academy of Sciences; Shishir K Singh—Polish Academy of Sciences; Samir Mustapha—American University of Beirut	In-Situ Measurement of Local Contact Stiffness using Ultrasound #16629   Drithi Shetty—Rice University; Jonah Wagner—Rice University; Risto Djishev—Rice University; Matthew Brake—Rice University	Understanding How Filters Affect Data, Part II #18007   John Hiatt—Dewesoft	Nonlinear Behaviour in Flexible, Large-Scale Space Structures: Dynamics and Control #16738   Alex J. Elliott—Cranfield University; Leonard Felicetti—Cranfield University
Demonstration of Neuromorphic Event-Based Imagers for Optical Measurement of Melt Pools for Additive Manufacturing and Welding Diagnostics #16727   David L. Mascarenas—Los Alamos National Laboratory; Andre W. Green—Los Alamos National Laboratory	Full-Field Diagnostics of Bolted Joints Using High-Speed Optical Techniques #16647   Khalid Alkady—University of Nebraska-Lincoln; Javier Arroyo—University of Nebraska-Lincoln; Daniel Rohe—Sandia National Laboratories; Dannelle Aragon—Sandia National Laboratories; Ronald Hopkins—Sandia National Laboratories; Robert J. Kuether—Sandia National Laboratories; Keegan Moore—University of Nebraska-Lincoln	Using Accelerometer and Cell Phone Data Together for Modal Analysis #17982   Mark Richardson—MechaniCom	Noninvasive Control in the Presence of Model Uncertainties #16526   Hamed Rezaee—Imperial College London; Ludovic Renson—Imperial College London
Investigating Vibrational Characteristics of Novel Lattice Structures Using non-contact Methods and Numerical Analysis #17113   Seyed Jamaledin Mostafavi Yazdi—Kettering University; Javad Baghersad—Kettering University; Jacob Lecluyse—Kettering University	Phase-Based Motion Magnification: A Comprehensive Study of its Application in Analyzing Nonlinear Structural Dynamics #16935   Cengizhan Taslicay—Rice University; Serena Occhipintia—Politecnico di Torino; Victor Clerc—FEMTO-ST; Jessica Herbert—Rolls-Royce; Celso T. do Cabo—Worcester Polytechnic Institute; Zhu Mao—Worcester Polytechnic Institute; Christoph Schwingshackl—Imperial College London; Matthew Brake—Rice University		Stability Analyses and Detection of Isolated Resonance Curves of Strongly Nonlinear Structures using Fixed Frequency Voltage Control Tests #16572   Eric Robbins—University of New Mexico; Robert J. Kuether—Sandia National Laboratories; Benjamin R. Pacini—Sandia National Laboratories; Fernando Moreu—University of New Mexico
Time-Inferred Sparse Autoencoder for Improved Full-Field Reconstruction from Sparse Measurements #16469   Nitin Nagesh Kulkarni—University of Massachusetts Lowell; Alessandro Sabato—University of Massachusetts Lowell	Multi-Model Uncertainty Quantification and Model Updating for the TMD Research Challenge #16982   Jonel A. Ortiz—Sandia National Laboratories; Moheimin Y. Khan—Sandia National Laboratories; David A. Najera—ATA Engineering, Inc; Robert J. Kuether—Sandia National Laboratories; Paul R. Miles—Sandia National Laboratories		Linearization and Nonlinear Model Reduction for the Model Predictive Control of Nonlinear Structure Vibrations #16541   Yichang Shen—Imperial College London; Ludovic Renson—Imperial College London
IMAC Social Event: Howl At The Moon—(see page 23 for details)			

Full detailed event schedule available on the Whova app.

# TECHNICAL PROGRAM THURSDAY (MORNING) | FEBRUARY 1, 2024

CHAIR(S)	SESSION TRACK	SALON 8	SALON 9	SALON 10
		DYNAMIC ENVIRONMENTS TESTING	DATA SCIENCE IN ENGINEERING	EXPERIMENTAL TECHNIQUES
		71. SHAKER DET	72. PHYSICS INFORMED MACHINE LEARNING	73. CONDITION MONITORING & DAMAGE DETECTION
		Julie Harvie—Lilium	Austin Downey—University of South Carolina; Eleonora Maria Tronci—Northeastern University	Doug Osterholt—ATA Engineering
9:00 a.m.	Evaluating Vibration Controller Performance in Virtual and Hardware Tests #16760   Tessa Q. Lytle—Worcester Polytechnic Institute; Wyatt J. Saeger—University of New Mexico; Aiden Tombuelt—Clemson University; Shannon M. Danforth—Los Alamos National Laboratory; James P. DeClerck—Michigan Technological University; Brittany J. Ouellette—Los Alamos National Laboratory; John F. Schultze—Los Alamos National Laboratory	Physics Informed Machine Learning Part I: Different Strategies to Incorporate Physics into Engineering Problems #16944   Eleonora Maria Tronci—Northeastern University; Austin RJ Downey—University of South Carolina; Azin Mehrjoo—Tufts University; Puja Chowdhury—University of South Carolina; Daniel Coble—University of South Carolina	Development of a Road Condition Monitoring System Based on Vehicle Response and Fuzzy Classification #16620   Harry M. Ngwangwa—University of South Africa	
9:20 a.m.	Variable Transient Input Motion Influence on Shake Table Operational Conditions – Electrodynamic Shaker Applications #16794   Jaroslav Hruby—Vibration Research Corporation; Igor Neuhold—European Organisation for Nuclear Research; Tomas Drazan—University of Defense Brno; Cherie Stoll—Vibration Research Corporation; Zdenek Joska—University of Defense Brno	Physics Informed Machine Learning Part II: Applications in Structural Response Forecasting #17081   Austin Downey—University of South Carolina; Eleonora Maria Tronci—Maria Tronci; Puja Chowdhury—University of South Carolina; Daniel Coble—University of South Carolina	On the Influence of Structural Attributes for Transferring Knowledge in Population-Based Structural Health Monitoring #16931   Giulia Delo—Politecnico di Torino; Daniel S. Brennan—University of Sheffield; Cecilia Surace—Politecnico di Torino; Keith Worden—University of Sheffield	
9:40 a.m.	Influence of Shaker Dynamics on Base Mounted Test Article #16943   John M. Matthews—University of Massachusetts Lowell/Sandia National Laboratories; Troy J. Skousen—Sandia National Laboratories; Peter Avitabile—University of Massachusetts Lowell	Uncertainty Quantification of a Machine Learning Model for Deviatoric Force Identification with Conformal Prediction #16509   David A. Najera-Flores—ATA Engineering, Inc./UCSD; Justin Jacobs—Sandia National Laboratories; D. Dane Quinn—The University of Akron; Michael D. Todd—University of California San Diego; Anthony Garland—Sandia National Laboratories	Determination of Dynamic Tyre Forces using Artificial Neural Network Simulation #16573   Harry M. Ngwangwa—University of South Africa	
10:00 a.m.	Application of Operational Modal Analysis for In-Situ Deflection Shape Analysis during Shaker Tests #16803   Andreas Renner—m+p international; Marian Dieh—Leibniz University Hannover; Thomas Hoffmann—m+p international; Dale Schick—m+p international	Decoupling Nonlinear Normal Modes using Normalising Flows #16820   Tina A. Dardeno—The University of Sheffield; Lawrence A. Bull—The University of Cambridge; Nikolaos Dervilis—The University of Sheffield; Keith Worden—The University of Sheffield	A Machine Learning Based Damage Estimation Model for Monitoring Reinforced Concrete Structures #17100   Omair Inderyas—Ege University; Sena Tayfur—Ege University; Ninel Alver—Ege University; Necati Catbas—University of Central Florida	
10:20 a.m.	Multi-axis Vibration Solder Fatigue Analysis VS. Traditional Vibration Testing #16675   Thomas Brown—The University of Texas at Austin/Sandia National Laboratories; Lauren Tomanek—Sandia National Laboratories; Thomas Buchheit—Sandia National Laboratories; Kenny Leeson—Sandia National Laboratories; Jelena Paripovic—Sandia National Laboratories; Glen Throneberry—Sandia National Laboratories; Martin Sanchez—Sandia National Laboratories	Adaptive Radio Frequency Target Localization #16937   Anthony A. Petrakian—Texas A&M University; Parker TP Segelhorst—Colorado State University; Abigail R. Smith—Michigan Technological University; Jeffery D. Tippmann—Los Alamos National Laboratory; Zigfried Hampel-Arias—Los Alamos National Laboratory		
10:40 a.m.	Optical Comparative Analysis of Stress States of a Component Under Multi-Axis and Single-Axis Vibration Testing #16678   Thomas Brown—University of Texas at Austin/Sandia National Labs; Glen Throneberry—Sandia National Labs; Jelena Paripovic—Sandia National Labs; Lauren Tomanek—Sandia National Labs; Martin Sanchez—Sandia National Labs; Stephen Aulbach—Sandia National Labs	Machine-learning based Method for Structural Damage Detection #16687   Daniel Irawan—University of New South Wales; Evgeny Morozov—University of New South Wales; Murat Tahtali—University of New South Wales		
11:00-11:30 a.m.	Coffee Break—Ballroom Foyer			

Full detailed event schedule available on the Whova app.

SALON 11	SALON 12	SALON 13	SALON 14
COMPUTER VISION FOR STRUCTURAL DYNAMICS	NONLINEAR STRUCTURES & SYSTEMS	BASICS OF MODAL ANALYSIS	NONLINEAR STRUCTURES & SYSTEMS
74. IN MEMORY OF DAVID EWINS II	75. EXPERIMENTAL TECHNIQUES FOR NONLINEAR SYSTEMS	76. BASICS OF MODAL ANALYSIS: TUTORIALS III	77. INDUSTRIAL APPLICATIONS
Dario Di Maio—University of Twente; Weidong Zhu—University of Maryland, Baltimore County	Richard Wiebe—University of Washington; Ludovic Renson—Imperial College London	Michael Mains—The Modal Shop	Benjamin Pacini—Sandia National Laboratories; Deborah Fowler—Sandia National Laboratories
Continuously Scanning Laser Doppler Vibrometry for Vibration Measurement: A Tutorial on Principles, Recent Developments, and Applications #16718   Weidong Zhu—University of Maryland Baltimore County	Experimental Bifurcation Forecasting using the Transient Response of an Airfoil in a Wind Tunnel #16455   Jesús García Pérez—University of Michigan; Amin Ghadami—University of Southern California; Leonardo Sanches—Université de Toulouse; Guilhem Michon—Université de Toulouse; Bogdan Epureanu—University of Michigan	ABCs of LDVs: Beginner Level Introduction to Laser Doppler Vibrometry #17314   Vikrant Palan—Polytec, Inc.; Joerg Sauer—Polytec GmbH; David Damiani—Polytec, Inc. # Session Organizers

We would like to thank the following individuals for their efforts in organizing the sessions below:

## **05. Structural Health Monitoring I**

*Kirk Grimmelman—FDH Infrastructure Services*

## **06. Modal Analysis for the New/Young Engineer I**

*Timothy Marinone—ATA Engineering;  
Brandon Dilworth—MIT Lincoln Laboratory;  
Jason Blough—Michigan Technological University;  
Michael Mains—The Modal Shop*

## **09. Uncertainty Quantification in Dynamics**

*Babak Moaveni—Tufts University;  
Costas Papadimitriou—University of Thessaly*

## **11. Sensors**

*Chad Walber—Michigan Technological University*

## **13. Modal Analysis for the New/Young Engineer II**

*Timothy Marinone—ATA Engineering;  
Brandon Dilworth—MIT Lincoln Laboratory;  
Jason Blough—Michigan Technological University;  
Michael Mains—The Modal Shop*

## **14. Nonlinear System Identification I**

*Gaetan Kerschen—University of Liege;  
Nevzat Özgüven—Middle East Technical University*

## **16. Fusion of Test and Analysis**

*Ibrahim Sever—Rolls-Royce;  
Scott Ouellette—Los Alamos National Laboratory*

## **17. Open-source Scientific Computing in Structural Dynamics**

*Janko Slavič—University of Ljubljana*

## **18. Instrumentation**

*Chad Walber—Michigan Technological University*

## **19. Dynamics of Buildings**

*Milad Roohi—University of Nebraska-Lincoln*

## **20. Modal Analysis for the New/Young Engineer III**

*Timothy Marinone—ATA Engineering;  
Brandon Dilworth—MIT Lincoln Laboratory;  
Jason Blough—Michigan Technological University;  
Michael Mains—The Modal Shop*

## **21. Nonlinear System Identification II**

*Gaetan Kerschen—University of Liege;  
Nevzat Özgüven—Middle East Technical University*

## **23. Model Form Uncertainty incl. Round Robin Challenge**

*Roland Platz—Deggendorf Institute of Technology;  
Alana Lund—University of Waterloo*

## **26. Dynamics of Bridges and Rail**

*Bjorn Svendsen—NTNU*

## **30. Recursive Bayesian System Identification**

*Yashar Eftekhar Azam—University of New Hampshire;  
Eleni Chatzi—ETH Zurich;  
Nikolaos Dervilis—University of Sheffield*

## **32. High-speed Camera Based EMA I**

*Janko Slavič—University of Ljubljana*

## **33. Human Structure Interaction**

*Hae Young Noh—Stanford University;  
Fernando Moreu—University of New Mexico*

**37. Virtual Sensing & Realtime Monitoring**

Scott Cogan–CNRS;  
Garrison Flynn–Los Alamos National Laboratory

**39. High-speed Camera Based EMA II**

Janko Slavič–University of Ljubljana

**40. Structural Vibration Mitigation and Control**

Scott Harvey–University of Oklahoma;  
Nicholas Wierschem–University of Tennessee

**44. Surrogate Modeling and Reduced Order Models**

Zhen Hu–University of Michigan–Dearborn;  
Kyle Neal–Sandia National Laboratories

**46. In Memory of David Ewins I**

Dario Di Maio–University of Twente

**53. Optical Systems for Rotating Structures**

Javad Baqersad–Kettering University

**60. DIC Applications**

Javad Baqersad–Kettering University

**62. Basics of Modal Analysis: Tutorials I**

Timothy Marinone–ATA Engineering;  
Brandon Dilworth–MIT Lincoln Laboratory;  
Jason Blough–Michigan Technological University;  
Michael Mains–The Modal Shop

**67. Optical System for Additive Manufacturing and Damage Detection**

Pawel Malinowski–Polish Academy of Sciences

**69. Basics of Modal Analysis: Tutorials II**

Timothy Marinone–ATA Engineering;  
Brandon Dilworth–MIT Lincoln Laboratory;  
Jason Blough–Michigan Technological University;  
Michael Mains–The Modal Shop

**72. Physics Informed Machine Learning**

Austin Downey–University of South Carolina;  
Eleonora Maria Tronci–Northeastern University

**74. In Memory of David Ewins II**

Dario Di Maio–University of Twente

**76. Basics of Modal Analysis: Tutorials III**

Timothy Marinone–ATA Engineering;  
Brandon Dilworth–MIT Lincoln Laboratory;  
Jason Blough–Michigan Technological University;  
Michael Mains–The Modal Shop

**81. Computer Vision for Civil Applications and SHM**

Tengjiao Jiang–Norwegian University of Science and Technology;  
Alessandro Sabato–University of Massachusetts Lowell

# Computer Vision and Laser Vibrometry

## Organized by:

*Technical Division on Computer Vision and Laser Vibrometry*

The Technical Division on Computer Vision and Laser Vibrometry aims to share knowledge on advances in the area of optical measurement techniques that are applied to the area of vibrations, structural dynamics, structural health monitoring, and dynamic measurement. This group covers presentations including, but not limited to, operating data measurement, modal parameter estimation, model updating, full field dynamic strain extraction, damage detection, and high-speed deformation measurement.

## **Tutorial: Optical and Vision-Based Systems to Measure the Dynamics of Rotating Structures #16715**

*Javad Baqersad - Kettering University*

*Jayant Sirohi - The University of Texas at Austin*

**Wednesday, January 31, 2024 | 11:30 a.m. | Session 53**

Dynamic modeling of rotating structures is challenging due to their complex structures and loading conditions. Measurement data can be used for developing and validating dynamic models and for monitoring these structures. Optical techniques have recently received considerable attention due to their ability to achieve full-field measurement and their robustness to work in testing environments where other measurement techniques may not be practical. These techniques have many advantages over conventional measurement approaches to measure the dynamics of rotating structures (e.g., challenges in wiring and mass loading). The presentation reviews a technical background on the structural dynamics of rotating blades. The tutorial also presents the most current trends in optical methods, such as digital image correlation, and highlights their novel structural dynamic measurement concepts and applications in rotating structures. The talk also discusses the future directions for applications of non-contact optical methods in structural dynamics.

## **Tutorial: Continuously Scanning Laser Doppler Vibrometry for Vibration Measurement: A Tutorial on Principles, Recent Developments, and Applications #16718**

*Weidong Zhu - University of Maryland Baltimore County*

**Thursday, Feb 1, 2024 | 9:30 a.m. | Session 74**

A laser Doppler vibrometer can measure the surface velocity of a point on a structure. A continuously scanning laser Doppler vibrometer (CSLDV) was developed to significantly improve efficiency and spatial resolution of vibration measurement of the structure. As a non-contact system, it can avoid the mass-loading problem in vibration measurement using accelerometers. The CSLDV was made by adding two orthogonal scan mirrors in front of a single-point laser Doppler vibrometer. Two scan mirrors can be referred to as X and Y mirrors based on their rotation axes, respectively. During CSLDV measurement, two scan mirrors can be controlled to continuously rotate about their rotation axes, and the laser spot of the CSLDV can continuously move along a pre-designed scan trajectory on the structure, which is a major difference compared to a conventional scanning laser Doppler vibrometer (SLDV) system that has a point-by-point scanning capability. This tutorial first overviews principles in vibration measurement using a CSLDV, such as signal processing methods for structures under various excitations such as sinusoidal, impact, and random excitations, and scan trajectory design methods for structures with various shapes. Recent developments on (1) a novel general-purpose three-dimensional (3D) CSLDV system for measuring 3D full-field vibration of a structure with arbitrarily curved surfaces, and (2) a novel zero-contact image-based tracking CSLDV system for measuring vibration of a rotating structure are presented. The general-purpose 3D CSLDV system can measure vibrations of difficult to access areas of structures with the assistance of reflective mirrors and obtain their 3D panoramic modal parameters through a novel vibration stitching method. The image-based tracking CSLDV system can track and scan a rotating structure such as a rotating wind turbine blade through a novel edge detection method and estimate its modal parameters through an improved lifting method and an improved demodulation method. Applications of continuous scanning laser vibrometry to structural damage detection will be discussed.

# Computer Vision and Laser Vibrometry *(continued)*

## Computer Vision & LDV Best Paper Award by Polytec

The Optical Techniques & Computer Vision Best Paper Award was established in 2018 to attract high-quality publications and presentations of interest to the DIC, Computer Vision, and Optical Techniques community at IMAC. Three best papers are recognized with a certificate and a monetary award, funded by Polytec and Correlated Solutions. The awards will be presented at the Awards Luncheon on Wednesday of the conference.

## Sessions:

- 32. High-Speed Camera Based EMA I
- 39. High-Speed Camera Based EMA II
- 46. In Memory of David Ewins I
- 53. Optical Systems for Rotating Structures
- 60. DIC Applications
- 67. Optical System for Additive Manufacturing and Damage Detection
- 74. In Memory of David Ewins II
- 81. Computer Vision for Civil Applications and SHM ■

## Data Science Applications

### Organized by:

*Data Science Technical Division*

The Data Science Technical Division promotes the application of data analytics in structural and mechanical engineering. Machine learning, deep learning, neural networks, big data, statistics, Gaussian processes, and related methods define the analytical toolset, referred to as Data Science, to process vast volumes of measurements and predictions, analyze complex phenomena, identify trends and relationships, and guide predictive models through empirical data. Progress in smart systems (sensors with integrated signal processing) and sensing technologies (high-speed video, laser sensing, unmanned aerial vehicles, etc.) increasingly requires data management strategies and frameworks. High-performance computing and cloud systems are becoming unavoidable to store, classify, interpret, and visualize these data. Statistical and machine learning methods provide fast, resilient, adaptive, scalable engines for the online monitoring of structures and mechanical systems, and to support decision-making and risk analysis. The TD proposes technical sessions on Wednesday and Thursday that present applications of Data Science to structural monitoring and damage detection, advanced manufacturing, and optimization. Consider attending to learn recent developments, share points-of-view, and contribute to moving Data Science forward.

## Sessions:

- 51. Applications of Machine Learning
- 58. Machine Learning and Modeling of Structures
- 65. Structural Modelling and Condition Assessment
- 72. Physics Informed Machine Learning ■

## Dynamic Environments Testing

### Organized by:

*Dynamic Environments Testing Technical Division*

The Dynamic Environments Testing Technical Division was recently established to assess and improve upon laboratory tests that are conducted in order to deem products as fit for service in their operational environments. This testing is often referred to as endurance, qualification, acceptance, or certification testing. The standards for performing these tests has remained largely unchanged for the past 50 years, however research in the field has accelerated significantly in the past decade.

The primary components of this type of testing include: characterization and specification of the service environment, determination of appropriate laboratory test excitation techniques, and design of a test fixture (adapter) to attach the product to the laboratory test equipment. This year's sessions and papers will showcase a variety of research spanning all of these focus areas. The topics covered within this technical division overlap notably with those of other technical divisions, and we invite all IMAC attendees to participate in our diverse sessions. ■

# Dynamic Substructures

## Organized by:

*Dynamic Substructures Technical Division*

Substructuring is a general paradigm in engineering dynamics where a complicated system is analyzed based on the dynamics of each subcomponent and the interactions between subcomponents. In numerical simulations, substructuring allows one to reduce the size of the model for a subcomponent of the system and reduce the computational burden by discarding those dynamics that are not important to the assembly/environment of interest. In other applications, a subcomponent model is derived experimentally from hardware, which can be beneficial when the substructure is difficult to model or when there is not enough information to create an accurate finite element model. Substructuring can also be used to couple numerical simulation with real-time testing of components. Such approaches are known as hardware-in-the-loop or hybrid testing.

Whether experimental or numerical, all substructuring approaches have a common basis, namely the equilibrium of the substructures under the action of the applied and interface forces and the compatibility of displacements at the interfaces of the subcomponents. Experimental substructuring requires special care in the way the measurements are obtained to establish acceptable equilibrium and compatibility in the presence of noise and a relatively small number of sensor degrees of freedom. In numerical approaches, the fundamental quest is the efficient computation of reduced order models describing the substructure's dynamic motion. For hardware-in-the-loop applications difficulties include the fast computation of the numerical components and the proper sensing and actuation of the hardware component. Recent advances in experimental techniques, sensor/actuator technologies, novel numerical methods, and parallel computing have rekindled interest in substructuring. The program this year contains several sessions focusing on different aspects of dynamic substructuring. ■

# Dynamics of Civil Structures

## Organized by:

*Dynamics of Civil Structures Technical Division*

The Dynamics of Civil Structures TD serves as a primary focal point within the SEM umbrella for technical activities devoted to civil structures analysis, testing, monitoring, and assessment. This TD covers all types of civil engineering structures such as buildings, bridges, rails, stadiums, dams, wind turbines, and so on. Please note that the TD holds its annual meeting during IMAC (IMAC-XLII: Tuesday, Jan. 30, 12:30 PM). The Dynamics of Civil Structures TD welcomes members and guests to attend our annual meeting.

Special sessions focusing on civil engineering research and applications are scheduled during the conference. This year's sessions and papers discuss a variety of topics including structural vibrations and dynamic analysis of buildings, bridges, and other civil structures, damage identification, structural health monitoring, vibration mitigation and structural control, localization and characterization techniques for human occupants, vibration serviceability, human-structure interaction, experimental modal analysis and experimental testing of in service structures, and innovative measurement techniques among many other topics. In addition, many of the technical sessions present new and innovative analytical and experimental methods applicable to a variety of civil structures. Many other topics of interest are also presented throughout the conference. The Dynamics of Civil Structures TD has also organized a competition this year for the Best Student Paper which will be awarded during the conference from student authored and presented papers that are included in several of the technical sessions. The Dynamics of Civil Structures TD welcomes all attendees to enjoy a very full and diverse technical program organized in the multi-disciplinary style unique to IMAC and SEM. ■

# Modal Analysis and Dynamic Systems

## Organized by:

*SEM/IMAC Modal Analysis/Dynamic Systems Technical Division*

The Modal Analysis and Dynamic Systems Technical Division serves as a primary focal point within SEM for technical activities devoted to general Modal Analysis and Structural Dynamics. ■

---

## Basics of Modal Analysis for the New/Young Engineer Program

## Organized by:

*Modal Analysis /Dynamic Systems Technical Division*

The field of Modal Analysis continues to evolve and mature. In order to allow new or young engineers in the modal field to extract deeper insight from paper presentations at the IMAC Conference, a program has been developed to familiarize the new/ young engineer with some of the basic material related to modal analysis. Held on the first day of the conference, the Basics of Modal Analysis lecture sessions are geared towards those individuals who have limited or no experience in the modal field or are interested in a refresher on some of the basic modal nomenclature. The material is centered on the topics of single degree of freedom theory, multiple degree of freedom theory, modal measurements, excitation techniques, and parameter estimation. The intent is to familiarize the new/young modal engineer with the nomenclature and basic techniques involved in modal analysis; the most basic fundamental equations will be explained in an overview sense rather than developed from a theoretical standpoint. These tutorial sessions should not be considered a training seminar but rather an overview of basic definitions that are inherent in most of the presentations at the conference. By attending these sessions, the new or young engineer should be able to better appreciate and comprehend more of the material that is presented in the technical paper presentations. Topics will include: SDOF and MDOF Theory, Measurements for Modal Analysis, Impact Testing, Shaker Testing, and Modal Parameter Estimation.

In addition, this year the TD is happy to present a series of tutorials offered by vendors on Thursday. The goal of these tutorials are to further bring to light the technical information that the new/ young engineers learned about on the 1st day of the conference by demonstrations through hardware and software. ■

# Model Validation and Uncertainty Quantification

## Organized by:

*SEM/IMAC Model Validation and Uncertainty Quantification (MVUQ) Technical Division*

Mathematical models and numerical simulations in structural dynamics are approximate representations of the actual systems they represent. Model verification and validation (MV) along with uncertainty quantification (UQ) activities provide a means to establish model credibility in a quantitative and objective manner. Model verification ensures that the mathematical model is being solved correctly while model validation ensures that model is a sufficient credible representation of reality. Uncertainty quantification seeks to evaluate the effects of uncertainties that originate from numerous sources and track the propagation of those uncertainties to the final prediction(s) of the model. MVUQ processes are necessary to ensure that advanced numerical models may be relied upon with confidence. The MVUQ sessions at IMAC-XLI are intended to be of interest to both newcomers and experienced hands in this field and should appeal to all conference attendees whose work makes use of model predictions.

The full program of talks over the four days will cover a broad span of recent work in this field, from the development of new tools for uncertainty quantification through to industrial applications of validation procedures. Highlights include the MVUQ Best Paper Award session, plus special sessions on topics as diverse as fusing the outcomes of test and analysis; recursive Bayesian system identification, virtual sensing and realtime monitoring, surrogate modeling and reduced order models. As a novelty in 2023, we started a round-robin challenge in the MVUQ Technical Division working on uncertainty quantification for different modeling approaches of a vibration isolation example with exclusive experimental test data. We invite the participants to join and present their results at the following IMAC conferences and in joint journal publications. ■

# Nonlinear Structures and Systems

## Organized by:

*Nonlinear Structures and Systems Technical Division*

Most real engineering structures behave nonlinearly. Therefore, it is necessary to address the presence of nonlinearity in all the steps of the engineering design process: in the experimental testing (to collect the most informative data), in the data analysis (to estimate nonlinear parameters correctly), in the mathematical modelling (to obtain accurate models of the structure) and in the numerical methods (to simulate and study the response effectively). In doing so, it will be possible to create a model that is more representative of reality and that can be used for better predictions once validated.

The nonlinear sessions address theoretical and numerical aspects of nonlinear dynamics as well as experimental techniques and analysis methods. Several sessions are also dedicated to joints and interfaces due to their omnipresence in structures. To introduce the participants to the fundamentals of nonlinear dynamics and provide an overview of some active research areas in the field, the nonlinear sessions also comprise three tutorials: one on the fundamentals of nonlinear oscillations by Prof. Paolo Tiso (ETH Zürich), one on model order reduction by Dr. Alessandra Vizzacaro (University of Exeter) and one on data-driven methods in nonlinear dynamics by Prof. Keith Worden (University of Sheffield).

## Meeting: International Committee on Joint Mechanics

**Monday, January 29, 2024 | 6:15 – 7:00 p.m. | Salon 7**

All interested people are welcome to join the International Committee on Joint Mechanics for our annual committee meeting. The agenda will focus on a debrief from the Fifth International Workshop (held in September 2023), updates on the action items for the committee, organization of the mini-workshops throughout the spring, dissemination of information for the summer research camps, and opportunities to become involved.

## Tutorial: Fundamentals of Nonlinear Oscillations

*Prof. P. Tiso, ETH Zürich*

**Monday, January 29, 2024 | 9:00 a.m. | Session 7**

Linear systems enjoy a set of properties that make their design relatively straightforward. Linear superposition, independence of natural frequencies to the response amplitude, single harmonic response to harmonic excitation, independence of the steady-state response to the initial conditions: all these “linear trademarks” allow the development of rather straightforward analytical techniques for the analysis of the response. However, linearity is in most cases an idealization, valid only in a (too) small neighborhood of the equilibrium, [1,2]. When the excitation and/or the initial energy provided to the system is large enough, a plethora of dynamic responses strongly deviating from the linear counterpart can arise. In several cases, the impact of nonlinearities needs to be understood to assure that the system indeed operates in the intended linear regime. In other cases, nonlinear responses can be exploited to enable new sensing and actuation functionalities. In both cases, it is important to tackle the analysis of the nonlinear system with the right analytical or computational tool. The purpose of this introductory tutorial is twofold. First, we overview the main types of nonlinearities that can affect a mechanical system. In doing this, we sketch the main features of the solutions, namely softening/hardening/mixed response, limit cycles, modal interaction, isolated responses. We illustrate some of these aspects with relevant engineering examples. Second, we overview the main analytical and numerical techniques available for the solution of nonlinear mechanical systems.

# Nonlinear Structures and Systems *(continued)*

## **Tutorial: A Tutorial on Data-Driven Methods in Nonlinear Dynamics**

*Prof. K. Worden, University of Sheffield*

**Tuesday, January 30, 2024 | 9:00 a.m. | Session 28**

The purpose of this tutorial is to give an overview of where ‘data-driven’ methods have been applied in nonlinear dynamics. Of course, the whole idea of learning from data has been enshrined in the field of system identification for decades; however, recent developments in Machine Learning have introduced new tools and viewpoints which bear examination. Apart from looking at how new ideas like Bayesian machine learning have transformed system identification, the applications of data-driven methods in the broader field of nonlinear dynamics will be considered.

## **Tutorial: A Tutorial on Nonlinear Model Order Reduction**

*Dr. A. Vizzaccaro, University of Exeter*

**Wednesday, January 31, 2024 | 9:00 a.m. | Session 49**

This tutorial introduces nonlinear methods for model order reduction of structures discretised with finite elements, with a particular emphasis on the case of geometric nonlinear structures. The aim of model order reduction (MOR) is to reduce the dimensionality of a large system of nonlinear ordinary differential equations by performing a change of coordinates from the original ones to new reduced ones. The two main ingredients of each (MOR) method are (i) the change of coordinates and (ii) the reduced dynamics in the new coordinate system. Specifically, nonlinear methods differ from linear based techniques, as they rely on a nonlinear change of coordinates rather than the addition of new vectors to enlarge the linear projection basis. ■

---

## Sensors and Instrumentation

### **Organized by:**

*J. F. Lally Sensors & Instrumentation Technical Division*

The SEM Sensors and Instrumentation Technical Division mission is to promote and encourage the exchange of non-proprietary information relating to transducers, data and control systems, and related components used to test and measure structural dynamic behavior. We continuously organize a series of IMAC tutorial sessions for those who are interested in improving their knowledge and skill in the use of sensors and instrumentation. This technical division sponsors annual sessions for OEMs to demonstrate their new technology and provide roadmap of their future efforts. We encourage sessions for unique instrumentation use cases of challenging tests and measurements of novel uses of traditional instrumentation. We sponsor “best practices” sessions ranging from instrumentation selection, installation techniques, data acquisition selection, cabling, and proper grounding techniques. The Sensors and Instrumentation Technical Division provides benefits from students to seasoned engineers across multiple engineering disciplines.

### **Technology Applications**

**Tuesday, February 14, 2023 | Sessions 31 & 38**

Due to the great interest in this session over the past few years, we are pleased to be able to offer it again at IMAC-XLI. Several IMAC Exhibitors will provide brief presentations highlighting their hardware and software applications and services. Come visit this extremely timely session and then you will have the opportunity to obtain additional information from the exhibitors during the IMAC-XLI Exposition Hours. ■

# Exposition Directory

## Exposition Hours:

**Monday, January 29** 7:00 p.m.–8:30 p.m. (*Welcome Reception*)  
**Tuesday, January 30** 10:00 a.m.–5:00 p.m.  
**Wednesday, January 31** 10:00 a.m.–1:00 p.m. / 2:00 p.m.–5:00 p.m.

**S** = IMAC-XLII Sponsor  
**C** = SEM Corporate Member

### APS Dynamics, Inc. **C**

32124 Paseo Adelanto, Suite 3  
San Juan Capistrano, CA, 92675 USA  
949-234-9791  
sales@apsdynamics.com  
www.apsdynamics.com

APS DYNAMICS, INC specializes in designing, manufacturing, and marketing vibration systems for modal test excitation, low frequency vibration sensor calibration, and component test. Products include ELECTRO-SEIS long stroke shakers for modal excitation of structures and low frequency calibration of accelerometers, and DUAL-MODE voltage/current mode power amplifiers for driving shakers. Modal test excitation applications feature the long stroke capability of the ELECTRO-SEIS ball bearing shakers. Three basic sizes are offered: the APS 113 Series, the higher force APS 400, and the highest force APS 420 shaker. For sensor calibration applications, the APS DYNAMICS Long Stroke Shakers feature Air Bearing armature guidance for exceptionally clean waveforms with wide dynamic range and very low cross-axis motion. Four basic models are offered: the APS 113-AB for testing small sensors and components, the APS 129 with a large air bearing table coupled to the shaker for heavy test loads, the APS 500 a small air bearing table for high-frequency, high-acceleration testing, and the APS 600 shaker for the longest stroke length. The extensive customer base includes major Government contractors, Defense Departments, other Government Agencies, universities and research organizations, numerous manufacturers as well as engineering firms.

### ATA Engineering, Inc.

13290 Evening Creek Drive South  
San Diego, CA 92128 USA  
858-480-2000  
sales@ata-e.com  
www.ata-e.com

ATA Engineering Inc. (ATA) is an engineering consulting firm that provides innovative solutions through test- and analysis-driven design by focusing on the engineering needs of manufacturers in addressing their cost, quality, and time-to-market challenges for mechanical and aerospace systems. ATA supports the IMAC community as modal test and analysis experts.

### Correlated Solutions, Inc. **C**

121 Dutchman Blvd.  
Irmo, SC 29063 USA  
803-926-7272  
sales@correlatedsolutions.com  
www.correlatedsolutions.com

Correlated Solutions is recognized as the world leaders and inventors of digital image correlation, an easy to use full-field, optical measurement technique. The VIC-3D FFT system measures operation deflection shapes with amplitudes, strain, velocities, and accelerations at frequencies up to 100kHz with nanometer resolution for sample sizes ranging from millimeters to meters (and larger). The newest release of VIC-3D 10 features FFT improvements including in-plane vibration visualizations using VIC-3D's exclusive and powerful iris graphics engine. Come by booth number 211 to learn how VIC-3D FFT can meet your academic and industrial vibration measurement needs.

### Crystal Instruments **S**

2090 Duane Avenue  
Santa Clara, CA 95054 USA  
408-986-8880  
sales@go-ci.com  
www.crystalinstruments.com

Crystal Instruments designs and manufactures market-leading Dynamic Signal Analyzers and Vibration Control Systems for machine condition monitoring, dynamic measurement, and environmental testing. We strive for innovation and engineering excellence in our products and services and serve a variety of industries including Automotive, Aerospace, Military, Electronics, Education, and Contract testing.

### Dantec Dynamics

750 Blue Point Road  
Holtsville, NY 11742 USA  
631-654-1290  
www.dantecdynamics.com

## **Data Physics**

1111 Spruce Street  
Riverside, CA 92507 USA  
408-437-0100  
sales@dataphysics.com  
www.dataphysics.com

Data Physics has been producing high-performance vibration testing and signal analysis solutions in the aerospace, defense and automotive industries since 1984. We design and manufacture a complete range of air and water-cooled electrodynamic shakers, vibration controllers, and dynamic signal analyzers – including all software applications. The SignalCalc 900 Series analyzer-controllers bring advanced features that streamline testing and feature exceptional distributed signal processing performance. Visit our website for in-depth information on modal testing and analysis: [www.dataphysics.com/products/dynamic-signal-analyzers/structural-analysis](http://www.dataphysics.com/products/dynamic-signal-analyzers/structural-analysis) [www.dataphysics.com/applications/dynamic-signal-analysis/modal-testing](http://www.dataphysics.com/applications/dynamic-signal-analysis/modal-testing) [www.dataphysics.com/blog/modal-analysis/modal-testing-with-shaker-excitation](http://www.dataphysics.com/blog/modal-analysis/modal-testing-with-shaker-excitation)

## **Dayton Digital LLC**

5230 Nautilus Drive  
Cape Coral, FL 33904 USA  
877-693-2986  
Ken@daytondigital.us  
DaytonDigital.us

Dayton Digital is an innovative, leading provider of cutting-edge wireless structural monitoring solutions. We are dedicated to ensuring the safety, longevity, and optimal performance of critical infrastructure through our innovative technology and expertise. Our Expertise: With years of experience in the industry, our team of engineers and technologists specializes in developing state-of-the-art wireless monitoring systems. We cater to a wide range of sectors, including civil engineering, construction, energy, and transportation.

---

## **DEWESoft LLC**

10730 Logan Street  
Whitehouse, OH 43571 USA  
855-339-3669  
sales.us@dewesoft.com  
www.dewesoft.com

DEWESoft is a data acquisition and analysis company with a wide variety of Hardware and Software options. Hardware covering sample rates of 10 to 15 MHz and Voltage inputs from 0 to 2000V. The Hardware can directly condition most all sensors input many digital formats. Software analysis covers noise, vibration, durability, telemetry, and automation applications.

## **Dynamic Design Solutions (DDS)**

Ambachtenlaan A4 box 5 Leuven  
3001 Belgium  
32 16 40 23 00  
info@femtools.com  
www.femtools.com

DDS develops the FEMtools software for structural static and dynamic simulation, dynamics substructuring, structural optimization, modal test planning and virtual testing, data acquisition, modal extraction, test-analysis correlation, and FE model verification, validation and updating. Interfaces with standard FE analysis software. Scripting provides unlimited extension, automation, and customization.

---

## **ETS Solution NA LLC**

9249 S Broadway, 200-419  
Highland Ranch, CO 80129 USA  
520-603-1577  
sales@etssolution.com  
www.etssolution.com

ETS Solutions offers affordable, high quality electrodynamic shakers, shock machines and environmental chambers. Our high-performance induction ring shaker and IPA-series amplifier is the perfect solution for aerospace applications and other high acceleration shock and vibration specs. We have the service team and all parts in stock to support our products in America and globally.

---

## **Hadland Imaging**

1414 Soquel Avenue, Suite 200  
Santa Cruz, CA 95062 USA  
408-203-2727  
trumbaugh@hadlandimaging.com  
www.hadlandimaging.com

Hadland Imaging – Experience the Invisible™ with ultra high-speed visible, infrared & Flash X-ray imaging solutions in the lab and on the range. Imaging solutions include the latest from Shimadzu, Scandiflash, iX Cameras, FLIR, SVS Vistek, AMOtronics, Xcitex Pro-Analyst, REL LED lights, Oxford Lasers and more. Better Gear. Better Results. We have the gear you need to get the job done right.

## **HBK**

19 Bartlett Street  
Marlborough, MA 01752 USA  
800-578-4260  
info.americas@hbkworl.com  
www.hbkworl.com/en

Empower the Innovators. Accelerate your product innovation with HBK solutions in real-time simulation, physical testing and predictive insights. From the electrification of mobility to the advancement of smart manufacturing, we support you throughout the entire product lifecycle, sharing your mission for a cleaner, healthier, and more productive world. Visit [www.hbkworl.com](http://www.hbkworl.com) for more details.

## **HEAD acoustics, Inc.**

6964 Kensington Road  
Brighton, MI 48178 USA  
248-486-0099  
info@headacoustics.com  
www.head-acoustics.com

HEAD acoustics is much more than just sound quality! Our product portfolio includes the new ArtemiS Suite Modal, which uses machine learning to automatically find the best curve fit from your experimental data... you no longer need to spend time determining this yourself. HEAD acoustics HEADlab frontends can several hundred channels with a wide variety of inputs including IEPE, strain gage, charge type accelerometers, and much more. HEADacoustics also supports the MECALC Quantus Series hardware which can go up to many 1000 channels and support an even wider array of specialty signal conditioning types. Need intuitive impact testing, ODS, shape comparison, or Transfer Path Analysis (TPA)? If so ArtemiS Suite has those too. Stop by our booth to find out more about how HEAD acoustics can help you with structural analysis... maybe we should call ourselves HEAD Vibration?

## **iX Cameras**

8 Cabot Road, Suite 1200  
Woburn, MA 01801 USA  
339-645-0778  
michael.quzor@ix-cameras.com  
ix-cameras.com

iX Cameras is a cutting-edge technology and product leader in high-speed (slow motion) imaging. Using proprietary innovative technologies, we design, build, and sell high-speed cameras and software for a wide range of advanced scientific research applications, including material science, shock and blast, biomechanics, and dynamic behavior of materials.

## **m+p international**

271 Grove Avenue, Bldg. G  
Verona, NJ 07044 USA  
973-239-3005  
sales.us@mpihome.com  
www.mpihome.com

Discover m+p International, your trusted global partner for cutting-edge test and measurement solutions. With a focus on innovation and reliability, we deliver tailored products to diverse industries, ensuring top-notch performance and precision. Our dedicated team collaborates closely with customers, offering exceptional support and expertise. From vibration control systems to noise monitoring solutions, our advanced portfolio caters to varied needs. Count on us for unparalleled service and visit [www.mpihome.com](http://www.mpihome.com) to elevate your testing capabilities and drive success in today's dynamic world.

---

## **MECALC Technologies, Inc.**

8000 Avalon Boulevard, Suite 100  
Apharetta, GA 30009 USA  
404-800-0825  
info@MECALC.com  
www.MECALC.com

MECALC is a global provider of advanced signal conditioning and data acquisition solutions. Our QuantusSeries platform is used by the world's leading manufacturers in Automotive, Aerospace, Space, and Defense. From sensor to data, our hardware has reliably provided the latest advancements in signal conditioning and acquisition for test and measurement applications. A RESTful API suite is available for in-house application developers.

## **NV-Tech-Design**

Paul-Lincke-Weg 10  
Steinheim  
71711 Germany  
+4915226760478  
info@nv-tech-design.de  
www.nv-tech-design.de

The unique product, the Scalable Automatic Modal hammer (SAM), is an advanced non-mass loading hammer excitation technique. This state of art technique, through targeted innovative measurements, is used to effectively evaluate the vibro-acoustics in the early development stage. The major advantage is that even non-linear specimen can be non-mass loaded excited and the values in terms of eigenfrequencies and damping can be extracted at specific force levels.

### **OmiSensing Photonics LLC**

6751 Columbia Gateway Drive, Suite 300  
Columbia, MD 21046 USA  
410-707-2419  
shan.zhong@omnisensingtech.com  
www.omnisensingtech.com

OmiSensing Photonics is a leading technology company to provide innovative, customer-focused photonics sensing solutions for various scientific and industrial applications. The main product line includes MotionGo series compact laser vibrometers (single point, scanning, 3D & 3D scanning) and MotionVIEW laser vibration testing station.

---

### **PCB Piezotronics**

3425 Walden Avenue  
Depew, NY 14043 USA  
800-828-8840  
info@pcb.com  
www.pcb.com

PCB manufactures vibration, pressure, force and strain, shock, and acoustic sensors used by design engineers and predictive maintenance professionals worldwide. Primary sensing technologies include piezoelectric (ICP®), piezoresistive, and capacitive MEMS. With a worldwide customer support team, 24-hour SensorLine, and a global distribution network, PCB is committed to Total Customer Satisfaction.

---

### **Polytec, Inc.**

16400 Bake Parkway  
Irvine, CA 92618 USA  
949-943-3033  
info@polytec.com  
www.polytec.com

Polytec is a leading provider of non-contact vibration analysis solutions, empowering our customers to maintain technological leadership in their fields. We offer automated full-field dynamic motion characterization on critical structures, enabling you to gain deep insights into the behavior of your products and systems under real-world conditions. Our laser Doppler vibrometers, coupled with the next-generation QTEC® technology, assures the accuracy and reliability of the data, as well as the ease-of-use of the measurement process. Whether you need a one-time testing service, a rental solution, a lease agreement, or a permanent system installation, our team of experts is here to help you choose the right solution for your needs.

### **Precision Filters, Inc.**

240 Cherry Street  
Ithaca, NY 14850 USA  
607-277-3550  
pinfo@pfinc.com  
www.pfinc.com

PRECISION FILTERS, INC. is a global provider of instrumentation for test measurements. You can rely on a single source for signal conditioning and switching—a complete range of instrumentation—products optimized to work together to provide high performance at reasonable cost. PFI designs and manufactures precision solutions that include a family of analog signal conditioning, filtering and switching systems. The 28000 Signal Conditioning System provides a complete range of transducer conditioning with up to 256 channels per chassis. Precision's solid-state switch provides up to 256x256 cross-point switching and replaces tedious manual patch panels. The PF-1U provides 8 or 16 channels of high performance filter/amplifiers in a compact package with Ethernet control.

---

### **RDI Technologies**

10024 Investment Drive  
Knoxville, TN 37932 USA  
865-606-1080  
info@rditechnologies.com  
www.rditechnologies.com

RDI Technologies developed Motion Amplification® technology to empower users to see and measure motion that is impossible to see with the human eye without using contact sensors. By turning complex data into easy-to-understand videos, we enable users to solve their toughest problems quickly and safely.

---

### **Shock and Vibration Exchange**

PO Box 165  
Arvon, VA 23004 USA  
ashley.shumaker@savecenter.org  
www.savecenter.org

The Shock and Vibration Exchange was founded in 2012 in order to serve as a clearing house for persons interested in shock and vibration and related specialties. The primary goals of "SAVE" are to maintain the continuity and offerings of the annual Shock and Vibration Symposium and its two 5-day shock courses.

### **Siemens Digital Industries Software**

5800 Granite Parkway, Suite 600  
Plano, TX 75024 USA  
albert.prosuk@siemens.com  
peter.schaldenbrand@siemens.com  
www.plm.automation.siemens.com/global/en/  
products/simcenter/simcenter-physical-testing.html

Siemens Digital Industries Software is driving transformation to enable a digital enterprise where engineering, manufacturing and electronics design meet tomorrow. The Xcelerator portfolio helps companies of all sizes create and leverage digital twins that provide organizations with new insights, opportunities and levels of automation to drive innovation. Siemens Simcenter TEST will present its broad range of solutions for noise and vibration including the SCADAS family of measurement systems, Testlab software platform, Sound Camera and Digital Image Correlation (DIC). Siemens Digital Industries Software – Where today meets tomorrow.

---

### **Specialised Imaging**

40935 County Center Drive, Suite D  
Temecula, CA 92592 USA  
951-296-6406  
info@specialised-imaging.com  
specialised-imaging.com

Specialised Imaging is a manufacture of ultra high-speed imaging solutions for scientific research and military applications. These solutions include the award winning projectile trajectory tracking system, framing and ballistic range cameras, image intensifiers, illumination and triggering systems. Service and software. Specialised Imaging also offer streak cameras and long record duration video camera systems.

---

### **Spectral Dynamics, Inc.**

2199 Zanker Road  
San Jose, CA 95131 USA  
301-606-7764  
markm@spectraldynamics.com  
www.spectraldynamics.com

Spectral Dynamics, Inc. specializes in manufacturing environmental testing equipment with market leading data acquisition and control. SD is the only company where the quality of the data measured and recorded is the top priority. Spectral Dynamics manufactures vibration shaker systems with the unique ability to combine any size shaker, in all configurations from single degree of freedom (DOF) to multi degree of freedom systems. SD builds multi shaker single DOF, multi shaker 3DOF and multi shaker 6DOF systems up to 20 shakers. All shakers are simultaneously controlled in amplitude, phase and coherence in real time. Spectral Dynamics's patented vibration controller has the unique ability to control complex configurations as well as safety record all data - processed and raw. What you see on the screen is what you see on the shaker. Period.

### **Structural Vibration Solutions A/S**

Novi Science Park  
Niels Jernes Vej 10 Aalborg  
DK-9220 Denmark  
45 9635 4422  
info@svibs.com  
www.svibs.com

Structural Vibration Solutions A/S is the developer of ARTeMIS Modal software platform. ARTeMIS Modal is an open, and user-friendly platform for modal testing, modal analysis and modal problem solving. If you can measure the vibrations, ARTeMIS Modal can give you the modes in terms of mode shapes, natural frequencies, and damping ratios. For two decades ARTeMIS Modal has been the preferred software for Operational Modal Analysis (OMA). The modal analysis technology for the vast number of cases where it is preferred not to control or measure the loading. Now ARTeMIS Modal also includes polyreference methods for Experimental Modal Analysis (EMA), and tools for long term Structural Health Monitoring (SHM).

---

### **The Modal Shop**

10310 Aerohub Boulevard  
Cincinnati OH, 45215 USA  
513-351-9919  
info@modalshop.com  
www.modalshop.com

The Modal Shop delivers innovative structural vibration and acoustic sensing systems and services to test laboratories and manufacturing facilities around the globe. We offer a world-leading sound and vibration rental program, precision calibration systems, modal shakers, non-destructive test systems, and digital sensors, which are all designed to simplify testing for our customers.

---

### **Vibrant Technology**

13275 East Fremont Place, Suite 270  
Centennial, CO 80112 USA  
888-815-5067  
mrchardson@vibetech.com  
www.vibetech.com

For many years, engineers, analysts, and technicians have depended on Vibrant's ODS and Modal Analysis technology to efficiently and cost-effectively address intricate noise and vibration challenges. Our flagship software, MEScope, harnesses cutting-edge 3D animated models, videos, and post-processing tools to transform data into actionable solutions.

## **Vibration Research**

1294 Chicago Drive  
Jenison, MI 49428 USA  
616-669-3028  
[vrsales@vibrationresearch.com](mailto:vrsales@vibrationresearch.com)  
[www.vibrationresearch.com](http://www.vibrationresearch.com)

Since 1995, Vibration Research (VR) has been the innovator in vibration control, data acquisition, and signal analysis. It builds reliable and user-friendly software and hardware at its headquarters in Michigan, USA. Testing labs worldwide trust Vibration Research for the industry's best systems and support that delivers unrivaled value.

**FUTURE PROOF  
INSTRUMENTATION**

Introducing **QuantusSeries**, the advanced front-end for dynamic data acquisition. With its modular architecture, **QuantusSeries** offers ultimate flexibility in expanding your measurement system. Whether you need 2 channels or thousands, **QuantusSeries** is portable, flexible and scalable. But it's not just about hardware, embedded within our hardware is the **QuantusSoftware QServer API**.

Our out-of-the-box **QuantusSoftware** comes ready to use with the **QAcquire** embedded web application, allowing you to set up and control measurements and view real-time streaming data. The **QDataManager** utility facilitates data transfer and conversion into different file formats. Developers will appreciate our utility libraries that simplify tasks such as device discovery, software upgrades and data conversion. Our **QServer** RESTful interface allows for easy integration across various programming languages such as MATLAB, LabVIEW, Python, C++ and C# eliminating the need to understand complex hardware settings.

Our **PartnerNetwork** guarantees personalized software-hardware solutions, explore the endless possibilities and transform your ideas into reality. Join our growing community on GitHub and ScrumSpace, where developers can access open-source toolboxes, contribute their own solutions, and collaborate with fellow Power Users.

# SEM Membership Information/Contacts

## SEM Membership

Membership in SEM is open to any individual who supports the mission of the society. The members of SEM encompass a unique group

of experimentalists, development engineers, design engineers, test engineers and technicians, students, and research and development scientists from industry and educational institutions. Prices listed (except Individual Life Membership) are for one year of membership.

**Individual Membership**..... \$100

### Student Membership

**Undergraduates**..... \$35

**Graduates**..... \$50

**Individual Lifetime Membership**..... \$1,500  
(membership NEVER expires)

### SEM Corporate Membership

**Sustaining Membership**..... \$2,100

**Commercial Membership**..... \$1,200

**Government / Military Membership**..... \$900

**Educational and Non-Profit Membership**..... \$600

### SEM Membership Add-On Options

**Experimental Techniques (Print)**..... \$75

**Experimental Mechanics (Print)**..... \$75

**Journal of Dynamic Behavior of Materials (Print)**..... \$75

SEM Membership has its benefits! Among those benefits is free electronic access to a number of journals. To sign up for any of the above options, select them upon registration.

## 2023-2024 IMAC Advisory Board

### Conference Director

David Epp – Sandia National Laboratories

### Future Conference Committee

Sez Atamturktur – Pennsylvania State University

Julie Harvie – Lilium

Tyler Schoenherr – Sandia National Laboratories

### Program Planning Committee

Matt Allen (Chair) – Brigham Young University

James Akers – NASA John H. Glenn Research Center

Zhu Mao – University of Massachusetts Lowell

### Exhibit Planning Committee

Rick Bono – The Modal Shop

Jim Steedman – Navcon Engineering

Tim Marinone – ATA Engineering, Inc.

# Registration Information

## Conference:

January 29 - February 1, 2024

## Pre-Conference Courses

January 28, 2024

Course fee includes lunch each day of the course, course handout materials, and refreshment breaks. Lodging and additional food or materials are not included.

## Cancellation Policy

If the course or conference is canceled for any reason, the Society for Experimental Mechanics' liability is limited to the return of the registration fees.

We understand that circumstances may arise that require you to cancel. If you need to cancel, your conference fee, less a \$75.00 nonrefundable cancellation fee, will be refunded when the cancellation is made in writing and received by December 29, 2023. No refunds will be given for cancellations received after December 29, 2023. Cancellation notification should be faxed or emailed to Shari Matthews: Fax: 203-790-4472; shari@sem.org

*† Payments made with PO must be submitted no later than December 29, 2023. After December 29, 2023 PO will not be accepted as a form of payment. + Payment Net 30 days.*

## Registration Rates

	Early Bird	Regular	Late
Member	\$925	\$1025	\$1100
Non-Member	\$1050	\$1225	\$1300
Student Member*	\$300	\$350	\$375
Student Non-Member*	\$360	\$435	\$460

**Early Bird Rates effective 10/3/23 UNTIL 12/19/23 @4:59 PM EST**

**Regular Rates effective 12/19/23 at 5:00 PM UNTIL - 1/16/24 at 4:59 PM EST**

**Late Rates effective as of 1/16/24 at 5:00 PM EST**

*\* please see Student Membership requirements under at [www.sem.org/faqs#bb](http://www.sem.org/faqs#bb)*

## Conference Registration

Registration fee entitles the registrant to 350+ 20-minute technical presentations, free downloadable conference submissions (available for 30 days after the conference), full access to the Whova App, and includes the following: Welcome Reception on Monday, January 29, Exposition, Awards Luncheon on Wednesday, January 31, and IMAC-XLII Social Event on Wednesday evening.

Conference participants, including authors, coauthors, students, and session chairs, should preregister online at [sem.org](http://sem.org). Your badge and other conference materials will be ready for you when you arrive at the registration desk.

All those who registered by the December 19, 2023 deadline are eligible to win one of many door prizes being offered by IMAC Exhibitors.

## Students

To qualify for student rates, you must be a full-time engineering or science student at the time of the conference. This includes Graduate and/or Undergraduate students. Post-Doctoral do not qualify and must pay regular rate. An unofficial transcript showing proof of enrollment MUST be emailed to Shari Matthews (shari@sem.org).

*\* please see Student Membership requirements under at [www.sem.org/faqs#bb](http://www.sem.org/faqs#bb)*

## Conference Registration Hours

### Course Only Registration:

Sunday, January 28, 2024 .....8:00 AM –10:00 AM

### Conference Registration:

Sunday, January 28, 2024 .....4:00 PM–6:00 PM

Monday, January 29, 2024.....7:00 AM–4:00 PM

Tuesday, January 30, 2024.....7:30 AM–4:00 PM

Wednesday, January 31, 2024.....7:30 AM–4:00 PM

Thursday, February 1, 2024.....8:00 AM–1:00 PM

# SEM/IMAC Code of Conduct

**The Society for Experimental Mechanics, Inc.** is committed to making its SEM/IMAC Conferences inclusive spaces for sharing ideas and knowledge by providing a safe and productive meeting environment that fosters open dialogue and the exchange of scientific ideas, promotes equal opportunities and treatment for all participants, and is free of harassment and discrimination. All participants are expected to treat others with respect and consideration, follow venue rules, and alert staff or security of any dangerous situations or anyone in distress. Speakers are expected to uphold standards of scientific integrity and professional ethics. The policies herein apply to all attendees, speakers, exhibitors, staff, contractors, volunteers, and guests at SEM/IMAC Conferences and related events.

SEM/IMAC prohibits any form of harassment, sexual or otherwise. Harassment should be reported immediately to SEM/IMAC Conference staff and via email: [director@sem.org](mailto:director@sem.org) or (203) 790-6373 extension 100.

## What is Harassment?

Harassment includes speech or behavior that is not welcome or is personally offensive, whether it is based on ethnicity, gender, religion, age, body size, disability, veteran status, marital status, sexual orientation, gender identity, or any other reason not related to scientific merit. It includes stalking, unnecessary touching and unwelcome attention.

Behavior that is acceptable to one person may not be acceptable to another, so use discretion to be sure that respect is communicated. Harassment intended in a joking manner still constitutes unacceptable behavior. Retaliation for reporting harassment is also a violation of this policy, as is reporting an incident in bad faith.

## Reporting Harassment

SEM/IMAC is committed to supporting a productive and safe working environment for everyone at our conferences. If an individual experiences, or witnesses, harassment, they should contact SEM/IMAC Conference staff and via email: [director@sem.org](mailto:director@sem.org) or (203) 790-6373 extension 100, or, if during a conference, by using a venue phone and ask for security if they feel unsafe. All complaints will be treated seriously and responded to promptly.

If an individual experiences harassment, it is recommended that, in addition to notifying SEM/IMAC Conference staff, they write down the details, as they may be asked to fill out a report. They are not expected to discuss the incident with the offending party. Their confidentiality will be maintained to the extent that it does not compromise the rights of others.

## Filing a Formal Complaint of Harassment

If an individual wishes to file a formal complaint of harassment:

- Notify SEM/IMAC Conference staff and via email: [director@sem.org](mailto:director@sem.org) or (203) 790-6373 extension 100
- SEM/IMAC staff will discuss the details first with the individual filing the complaint, then with the alleged offender; seek counsel if the appropriate course of action is unclear; and report findings as needed to the SEM Executive Board
- SEM/IMAC will consult with the individual filing the complaint prior to taking any action

SEM/IMAC reserves the right to request the removal of any individual engaging in harassment type behavior from its Conferences. All conference fees shall not be refunded, the individual(s) will be prohibited from attending future SEM/IMAC Conferences and their employer or institution will be notified.

For any questions about this policy, please contact Nuno Lopes, Executive Director at [director@sem.org](mailto:director@sem.org) or (203) 790-6373 extension 100. ■

# Terms and Conditions

The following Terms and Conditions apply to the Society for Experimental Mechanics (SEM) website and to SEM Events, both online and in-person. As a condition of registration, you will be required to acknowledge and accept the SEM Terms and Conditions contained herein.

## Acceptance of our Terms and Conditions

Using our website indicates your acceptance of our terms and conditions. Your continued visits to our website after changes are posted to these terms and conditions will signify your acceptance of those changes.

## Photography and Video

Event participants grant SEM the absolute right to take photographs and/or make audio and visual recordings of an event for any purpose in SEM-related publications, promotion or website, at its sole discretion.

## Recording Policy

**Conferences, courses, and sessions:** Recordings of any kind are strictly prohibited without prior written consent of both SEM and the session presenter(s) or instructor. Attendees may not capture or use materials presented in any session/course room without written permission. Individuals not complying with this policy will be asked to leave a given session and/or asked to surrender their recording media. Refusal to comply with such requests is grounds for expulsion from the event.

**Exposition:** Recordings of any kind are prohibited without explicit permission from on-site company representatives. Individuals not complying with this policy will be asked to surrender their recording media and to leave the exhibition hall. Refusal to comply with such requests is grounds for expulsion from the event.

## Event Access

**Conference Events:** All conference technical and networking events require a badge for admission. Registered attendees may bring a guest if they have been issued a badge. Registration badges for guests are available at the SEM registration desk onsite.

**Exposition:** Everyone who attends the exposition must be registered and have a badge. Only company representatives allowed in the exposition area during move-in and move-out

## Payment Policy

SEM accepts VISA, MasterCard, American Express, checks and wire transfers as payment. For onsite registrations, only cash or credit card payments will be accepted. All registrations must be paid in full to access a conference. Invoice options are not available for credit card payments, only a system-generated receipt. All invoices must be requested more than 30 days before a conference start date.

## Presentation Policy

One paid Conference registration is limited to no more than two presentations per registered individual. Author(s)/presenter(s) wishing to present more than 2 presentations must pay for two registrations or have a co-author/presenter register for the Conference.

## Event Cancellation Policy

If for some unforeseen reason SEM should have to cancel an event, processed registration fees will be refunded to registrants. Registrants will be responsible for cancellation of travel arrangements or housing reservations and the applicable fees.

## Conference, Course and Session Cancellations

SEM reserves the right to cancel events and/or sessions. In the unlikely event of a cancellation, all registrants will be notified and will receive a refund, if applicable. Conferences, courses and sessions are subject to change, and SEM reserves the right to substitute a program, session, and/or speaker.

## Cancellations by Attendee/Refunds

Cancellations must be sent in writing or via email. All refunds are provided on a case-by-case basis and are reviewed 30 days post conference.

## Copyright

All materials and information posted on the SEM website are the property of SEM, whether or not a copyright notice appears on the screen displaying the information. Users of the SEM website may save and use the information contained therein only for personal use. No other use, including reproduction, retransmission or editing, of the information and materials posted on SEM's website may be made without the prior written permission of SEM, which may be requested by contacting SEM's headquarters.

## Limitation of Liability

In no event shall SEM or any of its affiliates, or the officers, directors, employees, members, or agents of each of them, be liable for any damages of any kind, including without limitation any special, incidental, indirect, or consequential damages, whether or not advised of the possibility of such damages, and on any theory of liability whatsoever, arising out of or in connection with the use or performance of SEM's website or events.

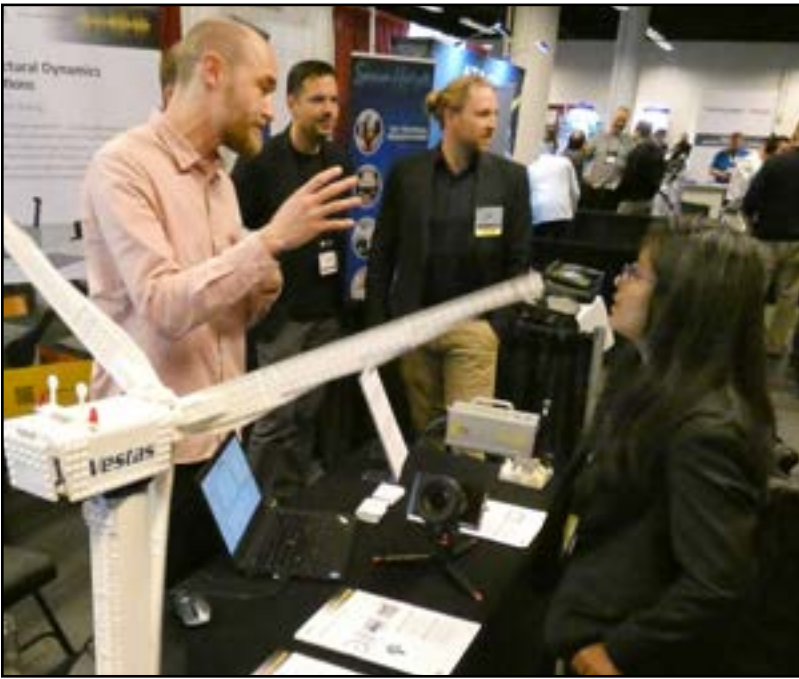

## Disclaimers

SEM is providing information and services on this website as a benefit and service in furtherance of SEM's non-profit and tax-exempt status. SEM makes no warranty, guarantee, or representation as to the accuracy or sufficiency of the information posted on the website, and SEM assumes no responsibility or liability regarding the use or misuse of such information. SEM makes no representations about the suitability of this information and these services for any purpose. Unless specifically stated otherwise, SEM does not endorse, approve, recommend, or certify any information, product, process, service or organization presented or mentioned on the SEM Web site, and information from the website should not be referenced in any way to imply such approval or endorsement. SEM expressly disclaims any and all liability or responsibility for any direct, indirect, incidental, special, consequential or other damages arising out of any individual's use of, reference to, reliance on, or inability to use, the SEM Web site or the information presented on the site. ■

# Memories From 2023

## Austin, TX

# WHOVA EVENT APP

The Whova Event App is **free** to download and is an integral part of your IMAC-XLII experience. Here's everything you need to know about the Whova App:

## Downloading

The Whova event app is for free for event attendees. To download the app, please follow **ANY** of the steps below:

- Open up the Apple Store or Google Play on your mobile device, and search for "Whova"
- Or, scan the QR codes here:

- Or, visit [www.whova.com/portal/imacx\\_202402/](http://www.whova.com/portal/imacx_202402/) in your web browser.

When you have found Whova, tap to download and install the Whova app.

## How to Sign In

1. Sign on to Whova with the same email as registered for the Conference on [sem.org](http://sem.org)
2. Create password and type in your name.
3. Profile Editing

Other attendees will see this and network with you, so make it look good. You can edit it later; click your profile picture (or a default headshot image) at top-left corner of the event "Home."

## 4. Access your event main page

- a. The app will take you to your event page automatically if organizers updated the app with your registration information.
- b. If the event doesn't show up automatically, search for IMAC-XLII.

## Technical Sessions: Interactive Q&A

The ability to interact, share ideas and ask questions is a mainstay of our events. Did you find an interesting presentation and want to ask a question? From the Agenda, within the app or the web platform, click on a session to view its details. On the mobile app, tap the Q&A icon and post your question (authors can then reply directly to your question at the scheduled time slot). On the web platform, Session Q&A should be automatically highlighted, click Ask a Question button, type your question and hit submit.

## Whova Event App User Tutorial

Need a quick glance at how to navigate and use the app? [www.whova.com/pages/whova-app-user-guide/](http://www.whova.com/pages/whova-app-user-guide/) ■
